

I wish to push my support for this project.

I currently work at the mine which supplies the neighboring power station . This arrangement is able to increase the efficiency of the power station through removing transport energy of the supply of coal from alternate mines around Australia. This also has a cost advantage for both supplier, consumer and in turn the public. This is important in the transition to cleaner energy.

Chain valley also employs over 250 workers directly and impacts indirectly thousands of 3rd party workers from Vales point power station, contractors, suppliers of goods, oem's and local community groups.

Thank you.

Regards Andrew Conley
