Submission of Objection

Moorlaben Coal Operations Stage 1 Mod 14, ~~Stage 2 Mod 3~~

My major concerns are about the impacts on water:

20 million litres per day of water discharge into the Goulburn River will further degrade water quality and cause additional ecological stress to the river.

MCO are now applying to double it to 20ML/day even though the current MCO discharge licence of 10 ML/day has never been used. The existing licence of 10ML/day should be more than adequate.

More salt, that hasn't been accounted for, will overflow into the river from the water treatment plant used for dust suppression. This brine coming from sediment dams will increase the total salt load of the Goulburn River. This in turn will threaten the health of Goulburn River in the National Park and the downstream water users.

Wilpinjong Mine has a salt discharge limit of 500 EC. There needs to be consistency with MCO having the same limit, not 900 EC.

The cumulative impact with Ulan Coal and Wilpinjong Coal Mines already approved mine water discharges will alter the natural flow regime and dump up to 30 tonnes of salt per day into the river system.

There has been no independent study of the cumulative impact of mining on the headwaters of the Goulburn River

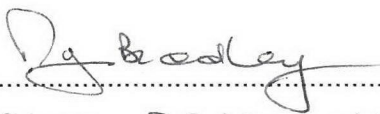

The Water Management Plan for previous approvals, required by October 2016, is not available

Groundwater model assumptions do not reflect potential impacts on springs and the upper groundwater system

Mine modelling failed to predict the 5 million litres per day groundwater make into Underground One. The long term effect of dewatering and draining the landscape above the mine has not been adequately assessed.

On these grounds I am objecting to this project and request that it isn't approved

Yours Truly
