Content:

There are a few concerns that I have about the submission.

- 1) There is no reference, other than mapping, of the extensive mining activity, both currently being undertaken and proposed, within the catchment. Nowhere could I see any acknowledgement of cumulative impacts on environment, cultural, economical etc outcomes. This is particularly concerning in relation to water and other water users- ie water quality being put in increased surface flows, groundwater etc. When the possible impact by drainage of water in the spring fed wells is recognised in one part of the assessment process but ignored through other relevant areas, I find it a skewed, inconsistent document
- 2) Iconic public areas like the Drip and Corner Gorge do not appear in the document, and I notice that the plans now state that the what I thought was Crown Land now belongs to the mine. Does that mean we will now be precluded from one of our favourite recreational/tourist destinations?
- 3) Night lights - I think the impact is far greater than the assessment indicates. I am able to notice significant increase in night lights from approx 35km as the crow flies. Nocturnal birds are impacted by the lights, and this is not acknowledged in your assessment
