We live on the southern end of this development and would like to make the following comments.
The MCC Executive summary shows several tables where our block (ID 47) is shown as "Significant exceedence" according to their modelling. We have not been consulted with by MCC for any future affects on our way of life. We purchased this block 10 years ago, and built a beautiful home 2 years ago, with full intention of remaining here. We were prepared to live with pit 3 as it was advertised as a short life span of 3 years. Now we are facing 26 years of a huge open cut pit 4. Figure 13 in Hansen Baily diagram depicts us in a 40 db range for all years of the mine life. Figure 14 depict t shading on our block and noting "significant exceedence".
