Subject: RE: MP 09_0134 MOD3

Dear Planning Dept.

Under no circumstances can the water board be allowed to increase the discharge of Nitrogen, Phosphorous and Ammonia from the Brooklyn Water treatment plant or any other for that matter. They made an agreement with the population of Sydney and the Government of the day. They cannot be allowed to walk away or vary the agreement.

They cannot be allowed to bugger up the environment in the river and all the wildlife, agriculture (including the commercial oyster beds) and quality of lifestyle and the environment finally improved after years of neglect. The river does not need to return to more algal blooms and the stink of the ammonia, nitrogen etc..

The reason given - it costs too much to stick to the agreement given over the levels of these chemicals discharged is ridiculous! If they got the technology wrong that is their problem and they must fix it at their cost not the communities.

[REDACTED]

I repeat under no circumstances can approval be given to this outrageous proposal.
