---

Hi Necola,

The EPA has reviewed the section 75W modification application and makes the following comments, consistent with the Project Approval issued March 2012 for application MP\_08\_0046 and original submissions from the Office Of Environment and Heritage in 2011 related to the project:

**Relocation of the approved fuel dock to N Arm with reconfigured berthing**

The relocation of the approved fuel dock represents no significant departure from the original approved facility. Approval condition B9 should remain unchanged and in force.

**Relocation of existing floating walkway connecting C Arm**

The EPA has no comment to make on the relocation of the walkway

**Floating berth finger to end of D Arm**

The EPA has no comment to make on the installation of a floating berth finger

The EPA maintains the comments put forward in correspondence to the then-NSW Department of Planning and Infrastructure dated 31/10/2011 by OEH (DOC 11/47883, FIL09/1320) in relation to:

- Water cycle management
- Contamination
- Dust and odour
- Noise

The EPA anticipates that the original conditions of approval in Schedule 2, and statement of commitments in Schedule 3 - including but not limited to noise management, sediment and erosion control management, water cycle management, slipway management, waste management - will remain in place and unchanged.

**Regards,**

**Alex Bowlay**
