

Despite overwhelming public opposition in 2012, AGL received conditional approval to build the largest gas-fired power station in Australia. Just 3km north of Dalton and 9km north-west of Gunning NSW. The proposed AGL Dalton Power Project is being presented as part of a solution within the current debate over Australia's Energy Security. A Gas fired power station such as this, should not be seen in isolation as such a solution, without considering the impacts on the communities which will be subjected to it.

I/We request the addressees to support us (the signatories) and take action in relation to the concerns raised in this letter.

# NO AGL GAS-FIRED POWER STATION FOR DALTON

Letter to:

**Prime Minister of Australia** Malcolm Turnbull  
**Greens Senator NSW** Lee Rhiannon  
**Minister for Indigenous Affairs** Nigel Scullion  
**NSW Greens MP** Jeremy Buckingham  
**MP** Angus Taylor  
**MP** Pru Goward  
**Minister For Planning** Anthony Roberts  
**Minister for Environment & Energy** Hon Josh Frydenberg  
**Minister for Energy & Utilities** Hon Don Harwin  
**Minister for Environment Local Government & Heritage** Hon Gabrielle Upton

Despite overwhelming public opposition in 2012, AGL received conditional approval to build the largest gas-fired power station in Australia. Just 3km north of Dalton and 9km north-west of Gunning NSW. The proposed AGL Dalton Power Project is being presented as part of a solution within the current debate over Australia's Energy Security. A Gas fired power station such as this, should not be seen in isolation as such a solution, without considering the impacts on the communities which will be subjected to it.

AGL received their original approval under highly questionable legislation that was repealed in 2011 after a corruption scandal that brought down the then NSW government. This loophole legislation affords our communities little say in how our towns and lives will be affected.

By repealing it, the NSW Government has acknowledged the corrupt and unfair practices that had resulted from Part 3A. Corrupt and unfair practices such as AGL's undisclosed political donations during the assessment of the Dalton Power Project. The "transitional" provisions are also soon to be repealed. We need our elected representatives to not simply allow AGL to avail themselves of the processes under Part 3A, in order to be seen as doing something about energy security.

The impacts on our communities are not acceptable collateral damage in the larger debate.

We urge our politicians to acknowledge the severity of the impact that this proposal has already had on the communities of Dalton and Gunning, and the devastating consequences for us if it ever proceeds. We do not believe the contribution to energy market security that such a peaking facility would make, justifies the harm that would be inflicted upon us.
