Regarding application Number:MP08\_0156 MOD 3  
Name of application: Illawarra International Health Precinct Modification  
nrose NSW 2530

As a resident, which lives directly across from the above mentioned site on Goolagong st

I am mostly in favour of the changes which are being proposed, this will allow residents to the southern end of Goolagong street, a much better view, and nearly close to their original view.

Our house at \_\_\_\_\_ is directly adjacent to the "acoustic mound" and in the middle section of Goolagong street.

It is of my opinion that this acoustic mound is useless, as the stock pile behind will always be over shadowing it, therefore it really has no use, it is an eye sore for the residents which live directly across the road.

And the spread of fire weed from this mound is currently un controllable.

Since the stockpile is being reshaped, I strongly request that this "Acoustic mound" be tapered back to join the stockpile behind, so instead of having an vertical wall of weeds, we would have a more original view again, of a sloping grassed hill.

I have always been in favour of this development, but I think every resident in the street has the right to obtain close to original views again.

Please do not hesitate to contact me by phone if necessary.

Please withhold my name & details from the department's website.

Regards
