Subject: Comments on MP 09_0098 Koondrook Perricoota Flood Enhancement Project

Thank you for the opportunity to read and comment on the proposal.

The South-west region and Landforms and Rehabilitation unit of the National Parks and Wildlife Service would like to extend our support for the proposal and note that the planned changes will most likely benefit the riverine and floodplain ecosystems in downstream Parks estate.

My only concern would be the potential for water quality issues to occur downstream of these releases and that these could impact on the ecology of downstream parks.

As we are land managers for the Whymoul, Weetuppa and Noorong Parks, all of which are directly downstream of the Thule creek release site, we would like to be engaged once operations through Thule creek are planned. This will give us an opportunity to get out onto those parks to monitor any possible responses or impacts from these flows.

Please feel free to contact Daniel, Tim or myself if you have any further questions for us, Many Thanks,

Dr Dale McNeil
