

How is PWCS proposing to minimise visual aspects?

In order to minimise visual impacts PWCS proposes to:

- Consider the use of particular paint treatments (e.g. recessive colours) to reduce the visual impacts of yard machines and shiploaders.
- Landscape and plant visual screens to minimise impacts from Cormorant Road.
- Develop a landscape management plan in consultation with the local community, to assist with buffering visual impacts and implementing appropriate landscaping treatments.
- Consider approaches to reduce night lighting impacts.
