Attention: Executive Director – Resource Assessments & Business Systems

I object to the proposed Jupiter wind farm.

I am a secondary school student and rely exclusively upon 3G delivered internet in order to do homework and revision for school. I have concerns that my mobile reception (and my ability to receive internet for school) will be badly affected by the Jupiter Wind farm. In the EIS, EPYC suggests that in order to fix dodgy mobile phone reception, I should simply “move to an area of better reception”. This is unfair as this is where we have chosen to live.

What allowance will I be given by my school to allow for the fact that I am forced to study in the ute from the top of Round Hill on my lap top and my mobile phone hot spotted?

It's ok for people who have NBN to make these types of claims, but I already have to put my phone on my window sill, facing East in order to get 2 bars of service.

Am I also now required to have a portable option for the TV aerial? What about the UHF base station that we have in the house? How does my Dad radio home for help if he has been tagged by a tiger snake at the far end of the property if the CB doesn't work anymore?

This hasn't been thought out very well in my opinion.

Student (Age 15, Year 10)
