

Objection to the Jupiter Wind Farm Project by EPYC Pty Ltd

I object to the proposed Jupiter Wind Project proposal because it will create substantial disruption to a community and environment that I value and cherish. I visit the Tarago/Mt Fairy area frequently and have friends and family in the area that will be badly affected by the Jupiter proposal.

I am a supporter of renewable energy but I do not think the Jupiter proposal has been well considered. It is a very poor choice of location for a major industrial facility. It will have substantial environmental and community impacts that are not properly addressed and I do not think wind turbines are an appropriate choice for more populated areas. Jupiter will have a major impact on the 59 residences that are within 2km of a proposed wind turbine, including places where I like to stay and visit.

In addition, I understand that the Jupiter project creates major community impacts including:

- Visual impacts and destruction of views and rural ambience
- Bushfire dangers
- Noise impacts
- Health impacts
- Disruption to wireless reception
- Disruption to the local community and personal relationships
- Property devaluation
- Biodiversity destruction
