Sydney NSW 2001

Development Application SSD 8636  
Location University of Sydney, darlington Campus  
Applicant: University of Sydney

Dear assessor,

I refer to the above development application and object to how Shepherd Street Darlington has been treated in the application

The university has a history of building the most vulgar and ugly sheds, plant and equipment stuck straight on Shepherd street, straight across the road for nice residential terraces. They create lovely internal spaces and buildings addressing in to the University, and shove the service sheds between the buildings and the residential street of Shepherd street

The University is planning to do that again with 2 new locations for plant and equipment built on the back of their lovely new development, staring at the pedestrians and residents of Shepherd Street

Please don't allow this!

The last thing they built is a shitty shed (attachment 1) across the road from nice terraces (attachment 2)

A further 20 metres up the street there are interesting warehouse conversions and terraces (attachment 3) straight across the road from their ugly Engineering buildings (attachment 4)

The 2 new abominations are shown in plan and elevation A-DA-3005. One is a bulk Cryo gas store and another is a gas store (attachment 5&6)..... just what we as residents and the public want to look at all day.

These plant rooms should be build inside the campus and not visible to the street and the residential properties of Shepherd street. There are a lot of internal road in the Uni that can provide access to these plants rooms without the public users and residents having to stare at them

1. Can you demand these 2 plant rooms be inside the campus and not visible from the street.
2. Can you demand that a plan to improve the appearance of the Uni when viewed for Shepherd Street between Cleveland street and Abercrombie street be prepared and exhibited for public comment.
