28 November 2016

Application Number: SSD6686

**Attention: Executive Director - Resource Assessments & Business Systems.**

The general conclusion drawn by the BDLG at that time from the assessment of the Bango Turbine Development EIS is that it is grossly inadequate in identifying the impact and risk to both people and the environment, in relation to flora and fauna, human health and real estate prices, and imposition on agricultural and firefighting practises. It is also evident that there has been inadequate community consultation carried out by CWP Renewables from 2008 until now.

A comprehensive assessment has been carried out on the proponent's assessment of the impact on Flora and Fauna and biodiversity in the footprint of the Bango Wind Turbine Development and surrounds by Australian Wildlife Services, a copy has been included in this response.

In summary, this review of the Bango EIS has identified

1. Inadequate assessment and modelling of the potential impacts on flora and fauna of the proposed development
2. Where impacts have been identified, there has been vague, inadequate or an absence of suggested mitigation and avoidance strategies suggested in the EIS.

We, the Boorowa District Landscape Guardians, request that serious consideration be given by the Department of Planning and Environment of the issues raised in this report and that the Department **do not allow approval** of this proposal.

**The BDGL reserves the right to submit additional information as part of this preliminary submission.**
