

To whom it may concern, in relation to the proposed Wellington gas fired power station.

I strongly object the to proposed Wellington gas fired Power Station on grounds related to Sound (both audible and inaudible low frequency and infrasound) as well as dust so close too the township and nearby residence of Wellington.

The suggestion that detailed studies of sound by ERM's work is an outrages and bold statement bordering on offensive to the community of Wellington which is located so close to the proposed project.

Any studies done for this project should be made public including all raw data including raw sound data. The public deserves to know and fully understand the significance of having such a large industrial development so close to their homes; including the impacts of this project on their lives.

I object to this project in the strongest possible wording.

Regards
Nicholas Lyons
