Hello,

I write with concern over the proposed construction of a gas fired power station at Wellington NSW. I object strongly to this project as I believe that this power station could have to potential to harm our residence with health issues. Some of these issues are well documented and relate to noise. The most destructive kind of noise is the one that we can't audibly hear and that is infrasound. The new data that is coming from research by independent sources clearly have stated that infrasound can cause nausea, headaches, heart palpitations and ringing of the ears to name a few. The NSW guidelines on noise are very much outdated and unfortunately the NSW Planning and Infrastructure use these documents to push through some of their State Significant Projects.

I object to State Significant Projects being pushed on citizens with many of us feeling helpless. The process to object is one which many home owners feel is useless. "It is already going ahead" "The project has been rubber stamped" "It's not worth objecting because it is going ahead anyway". These are the comments that I have heard regarding this project and these have come from people who represent our Council, if our local Councillors and people who work for the Dept of Planning are talking like this what hope have we got?

I have grave fears over this project and do not want it built.

Regards,

Linda Lyons

To Whom It May Concern,

As a resident of the Wellington Council area, I wish to lodge my objection to the above project on the grounds of noise (audible, low frequency and infrasound) and dust.

Thanking You,

Linda Lyons
