**Content:**

Our committee has discovered if the Moorebank Intermodal goes ahead it will mean that the local road network by 2030 will run 53% over the local road network. How can anybody or organisation suggest such a thing it will lead to many deaths and accidents and illnesses. Nobody cares for our area mitigation is not possible as the congested nature of the area and with 39000 in a 2km radius and 135000 in a 10 km radius no government or organisation has any right in impacting on such a number of residents and with one of the most valuable environments in Australia it is a national scandal. Also being one of the worst health areas in Australia it is downright disgraceful what is happening and it should bring everyone's condemnation

**Content:**

I am vehemently opposed to the SIMTA Moorebank Intermodal as there is no way the area can support such a project. Our roads are working at full capacity and the governments are hiding the real impact on the area. There are 39000 residents in a 2 km radius and 135000 in a 10km radius and it is an insult to the health and welfare of local residents. There is 850000 sq m of warehouses proposed and this is never revealed in the documents and with Eastern Creek the correct destination Moorebank will only be a further leg in the distribution chain. We know that by 2048 there is expected to be 7 million containers enter the port which means that our roads freight line will not cope with this volume of freight. The area next to the Moorebank Intermodals has many threatened and endangered species plants and flora like the Koala and woodlands Cumberland plain and other rare plants which could not possibly survive this sea of diesel emissions. Also I have discovered that the area is one of the worst health areas in Australia with the largest number of residents with diabetes and high asthma and lung cancer rates. The area is a known badly polluted area as it is known as a basin geography and pollution stays around for a considerable time. The south west of Sydney will have 450000 new residents in the next 25 years and with all traffic going through Liverpool traffic is tipped to increase by 10 times the present levels which means an extra 10000 trucks and 5723 cars would not fit on our roads. From my submissions it is easy to see the project should be situated in a far less congested area because it would be impossible to fit these vehicles on our roads
