BURNT YARDS, NSW, 2792

TO WHOM IT MAY CONCERN,

We are writing regarding the subject of the wind farm project – Flyers Creek.

We make submission IN OBJECTION TO FLYERS CREEK WINDFARM.

We moved to 'HILL VIEW' along with our 2 children and also re located our business Rainbow Ridge Nursery, a plant nursery from Sydney approx 9 years ago. We have been successful in this venture as we are very happy, the children are settled and doing very well at Errowanbang Public School, and we have managed to keep and expand our customers base of the nursery after the move.

With our two girls attending the local school, we cannot understand why a wind farm venture would even be considered so close to young learning children. The local community and supporting businesses have put in a lot of time and money supporting the school with its project to expand school numbers and resources. That has been achieved with numbers increasing at the school 10 fold and awards being won nationally regarding this project.

We left the hussle of Sydney life to enjoy everything the country has to offer. Our health and life style are now at risk due to many issues and possible effects these wind mill farms have on person.

We have never been approached by any one working for this windmill project . Either for discussion , to give us information, get approval or vote from us as we are rate payers, of even a general introduction. My understanding is that the local school, Errowanbang Public School has also been ignored by the people running this project. This disregard for local business and land owners , the shock of the uncaring dismissal of the children and staff that work and attend a government run school leaves us wondering how this project is possible.

With us being out of town, we need the reliability of our computers and phone services as a source of communication, income and safety. I have major concerns that these wind mills will most likely effect us of theses services to some degree which could cause major problems.

The roads surrounding us are of poor quality, not wide enough for heavy traffic and will become very dangerous if this project goes ahead with the large trucking equipment needed on a regular basis.

Please accept this letter as our OBJECTION TO FLYERS CREEK WINDFARM.

Yours Sincerely,

SHARON DRINKWATER
