Subject: Flyer Creek Industrial Wind Turbine

Hi there, PLEASE KEEP MY INFORMATION PRIVATE N CONFIDENTIAL

Im writting with my concern about the proposed Industrial Wind Turbines which have been era marked to go up in flyers creek..

I am a resident of flyers creek living on Errowanbang road ,we only moved here in August without knowleadge that there was a proposal to put a Industrial Turbine farm opposite to where i live,, no realesate said anything to us and we found out by getting to know the locals.

After looking into industrial turbine farms in America it stumps me stupid as to why we would even consider this in Australia as it has become painfully obviouse to me that they are a money making scam for the companies making these things and leaves a community in shambles after and creates a junk like landscape when the turbines are decomissioned.... has anyone in your department looked into how many are decomissioned and become pollution visually and environmentally??

Also green energy dosnt kill.... the wildlife will suffer from birds, bats n even the bee's... America and euroup have a bee shortage problem and orange being a food bowl area why would you want to risk affecting the bee population???

There must be a better way and turbine farms are not it , and not to mention the health implications of the population living around these turbine farms and live stock..

I would question why the turbine farm companies slap people with Gag orders when they get a turbine on their property.... dont alarm bells go of when there is no transparacy??

this farm is not wanted...

thank you
