Spring Hill

2800

Until recently living at:

171 Dunstaffnage Road

Browns Creek

2799

Environmental assessment for Flyers Creek Wind Farm (MP08 02520)

I object to the the project because :

- When the property was purchased in 2001, there was no mention of an industrial development in the next paddock . On the contrary, the peaceful serenity was pushed as a positive point.
- Quite significant conversations with the vendor (and neighbour) , even after purchase , offered no clue as to the intent to site the industry close by.
- I sold the property recently, due to the non partisan unfair method of negotiation methods of the turbine company and local host participants.(downright despotic mindset on their part)
- The many points of conjecture are being tabled daily , by people living too close to the proposed development , but the governments of the day are in thrall of the dollars and feel good spin of the turbine companies.
- The NEGOTIATION process has been NON EXISTENT , and the winners(money makers ) are disregarding the health and amenity detractions of the industrial development in a peaceful rural setting.
- This area has an excellent dollar for acre return for the nation as it is . and should not be penalised just for being successful .
- Many residents chose this area due to the climate and distance from the big smoke. How far are they expected to travel to attain the tree change life they require.
- Decentralisation , I'm old enough to remember it as a touted principle of state governments , will get a kick in the guts if punters can't rely on a better life , when shifting out of choked cities.
- There is no objection to wind factories as such , but the siting of the items needs much more thought.

- Investigations require more priority before factories are built.

Steve Parker.
