Re: Submission Coffs Harbour Bypass Environment Impact Statement : SSI 7666

I request that you consider, respect and support our concerns regarding the noise level and pollution that will impact on our property, [REDACTED], Nth Boambee Valley during the construction and completion as per your, Project update, Environmental Impact Statement, September, 2019.

On further investigation with your project team our property is outside of the acceptable noise goals and level guidelines. We also have two Bridges approximately 158 mtrs behind our property which will have the clippy clop when vehicles approach and exit bridge from the pavement.

Over the expected six year construction period and completion of the Coffs Harbour Bypass this will severely impact on our quality of life and substantially reduce the value of our property.

Due to Sleep deprivation, lack of fresh air, natural sunlight during construction and the completion of the Bypass we will be imprisoned in our own home and this will cause post traumatic stress, and also adding additional cost for electricity for cooling, heating and lighting.

We live in the area that adjoins Newports Creek with fantastic treed and natural fantastic Animal habitate that will be heavily impacted by the disturbance and change to their ~~to their~~ environment. With all the current global warming causing loss of endangered species this should be a priority to us all as stated by Sir David Attenborough, the Bypass should go further west with minimal impact to the above. I trust you will look favourably on my submission and address our concerns and make the right decision as this is not a Bypass but a Ring Road.

Thankyou Anne and Adrian Rhodes.
