Moolarben Coal Project stage 1. Modification 15

We are writing to state our strong objection to a decision to allow this development to proceed.

The reason for our objection should be obvious if one is aware of the rapid and tragic changes we are witnessing in Australia's record droughts and temperatures which have never before been recorded. There are dire water shortages in several large country towns and widespread rural areas. Sydney is certainly not exempt from water shortages due to the effect of unpredictable consequences of climate change. We feel that those people in charge of making what is now the very responsible decision of allowing coal mining to continue in the face of the very obvious consequences of continuing to burn fossil fuel in all its forms which we are sure you are very aware of. Your decision could be the catalyst in helping the on going climate deterioration of our world and our home. Please think very hard and responsibly before making your decision!

Yours sincerely Anthony & Sally Henderson
