Hi Krish

This is my submission, I would be grateful if you could ensure it is added. Thanks.

Re Sydney Gateway Tempe

1. My first concern is about the noise of heavy vehicle traffic during construction. What will be done to mitigate noise factors? Work should only be carried out during the day not in the evenings or overnight - our houses are too close to the site.
2. The site that is being excavated is an old tip - what is being done to mitigate smell pollution and environmental pollution from escaping during this time? The WestConnex experience for residents of St Peters was absolutely dreadful and this cannot be repeated for Tempe residents.
3. Bike path - along with many others, I use the current bicycle path to get to work and back - Tempe to Alexandria. It is vital a path is kept open during every day of construction.
4. After construction, I would like to see trees built along the length of the sound barrier wall, so all we see is trees rather than wall.
5. Trees. We need more trees! Please plant many many trees once construction is finished to create an area of bushland for local and visiting wild life.

Many thanks.

Katy Rogers
