Project name: Moorebank Intermodal Environmental Impact Statement

Objection to the Moorebank Intermodal Proposal

Name: [REDACTED]

Address: [REDACTED] Wattle Grove NSW 2173

Phone: [REDACTED]

Email: [REDACTED]

Signature: [REDACTED]

I want my name released online with my submission: Yes ☒ No ☐

I oppose the Moorebank Intermodal proposal and Environmental Impact Statement for the following reasons:

The Moorebank intermodal will place more traffic on the already congested road network. 10,000 heavy vehicles per day will need to access and leave the terminal utilising the M5 and local roads, 5,000 cars per day will need to access the site.

The Moorebank intermodal will not be an economically viable investment for the Federal Government and the state of New South Wales. The proposal should be relocated to Badgerys Creek in order to reduce supply-chain costs and cater for future urban growth.

Traffic

- The proposal will move the congestion from Port Botany to Moorebank, which is already congested;
- The Modelling does not cater for the predicted growth of the region;
- The intersections and road network are already congested, the proposal will increase traffic delays;

- Trucks 'weaving' onto and off the M5 between the Moorebank and Hume Highway interchanges will cause accidents and present a danger to my family; and
- Trucks parking and taking short-cuts through the nearby streets will make the area unsafe for my family and friends.

Noise

- There is no noise wall along the rail corridor along the Georges River, so noise will carry particularly at night;
- There will be no way to mitigate noise from the unloading/loading and movement of containers within the terminal, especially for residents living within 400 metres of the site;
- There will be no way to mitigate noise from the breaking and shunting of trains which will need to happen on site;
- There will be wheel squeal due to the tight radius curves needed for trains to enter and exit the site; this will keep me awake at night; and
- Residents up to 3km from Port Botany are kept awake at night, I don't want this for my family.

Air quality

- There will be Increased diesel fumes in the community generated from locomotives, heavy vehicles and other heavy equipment used on site, these fumes are carcinogenic;
- My family and friends will develop cancer or other health problems from the increased diesel fumes;
- The South-west Sydney is already heavily polluted due to the topography of the area;
- There will be dust and odour generated from this site, particularly during the construction period;

Heritage

- We have a strong military history in this area and we are proud of our heritage; removal of heritage features from the site will break ties for the community.

Location

- The site is surrounded by residential development, this site should have never been selected due to the young families who have settled in this area;

- This area is full of quiet, leafy suburbs with strong community connections, this development will be detrimental to the area and depreciate its value; and
- Other sites are preferable, such as Badgerys Creek, which does not have residential development nearby.

Contamination

- The unloading of imported containers in this area will have the potential to destroy native flora and fauna; and
- The unloading of imported containers in this area will have the potential to destroy the Georges River.

MICL and SIMTA Proposals

- There has been a lot of confusion around the fact that two proposals have been proposed for one area (SIMTA and MICL).
- The cumulative impacts of the two proposals have not been adequately explained or addressed by the proposals; and
- There is confusion as to the total traffic generated from the two proposals, as the modelling for each is different.

I support strategic planning and good land use. The intermodal development should be moved to a non-residential area, like Badgerys Creek.

Please reject this proposal on the grounds that it is not in the public interest with other better suited sites available.
