CULCAIRN SOLAR FARM    SSD-10288

To Whom it may concern

I strongly reject the proposal of a solar farm. Not only are there a lot of unanswered questions re the impact of quality agriculture soils after 25 years of solar panels but also the health and social impact to neighbouring farms and farmers and families.

As a land holder as well I am very concerned about the environment and the consequences the solar panels would have on land surrounding the project. Weeds, contamination, fire hazard and other issues which might arise. I know the land the proposed solar panel project is the go on and the country gets very wet and un accessible even in an average year of rainfall let alone when we do get floods.

After the solar panel's lifetime is finished where will all the panels be disposed of???? Are they safe to dispose with what they are made out of??? More toxic waste for our environment??

As a transport business owner we will lose cartage of grain, fertilizer and lime which will affect our small business income.

I also do not believe in climate change as a lot of figures and averages are manipulated to favour projects like this which will still not answer our problems but will just cost us more money in increased electricity prices.
