Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Jane Parkes

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I oppose the mine extension as it will damage and fracture the sandstone strata above nationally endangered swamps, and cause the swamps to be drained, as well as causing cliff collapse and damage to pagodas.

If any consent is granted, then:

- swamps must be monitored and any damage to the swamps must be a trigger for review of any consent, as Centennial Coal has already caused irreparable damage to nationally threatened upland swamps on the Newnes Plateau.

- the proposal needs to be amended to prevent damage to spectacular Birds Rock Flora Reserve, and associated, pagodas, cliffs and swamps

- the proposal needs to be further amended to protect the pristine catchment of Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area

- the proposal needs to be amended to reduce the risk of damage to the spectacular Wolgan Falls, by shortening proposed longwall mining panels along the Wolgan River side of the proposed mining area to prevent river water losses

It is also worth noting that in 2012, it was identified by the original consultants that targeted surveys of four nationally endangered plants needed to be carried out. Centennial failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

The amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely, Elizabeth Walton.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I hereby request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent.

In these changing times I don't see it as appropriate for consent to be issued for long wall mining for 33 years. In this timeframe I expect that technologies will change significantly, that the economics relating to energy systems and our perception of damage to nature will change significantly.

I don't see it as appropriate in changing times to lock in a particular technology for 33 years.

I am also a person that has walked in the Gardens of Stone area regularly and appreciate the area for it's natural values. This area has hidden natural troves waiting for discovery. Hidden fern gullies, interesting rock shapes. These are all being sacrificed for an outdated usage. A once ever use.

The Angus Place mine extension proposal does not adequately protect nationally endangered swamps. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

Every NSW Government Department must ensure that it no longer destroys this geomorphological wonderland. This landscape is ancient, rare, unique and fragile. It is more valuable as a protected as State Conservation Area, that brings future visitors to see its beauty. Its potential as a visitor destination must not be destroyed. Once destroyed, it will be destroyed forever.

The evidence for refusing this proposal can be found in 'Upland Swamps in the Sydney Region' by Dr Ann Young and 'The Gardens of Stone Heritage Report' (www.gardensofstone.org.au)

Both documents prove the destructiveness of irresponsible longwall mining and why modifications, strict limits and controls need to be placed on longwall operaations in order to ensure the protection of this rare fragile platy sandstone landscape.

I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

This is necessary as the NSW Government has committed itself to reaching net zero-emissions by 2050. To approve this amendment will undermine the NSW Government's action on climate change which aims to deliver a 35% emission reduction by 2030. If possible, Centennial Coal should be encouraged to apply for the $450 million Emissions Intensity Reduction Program to support its transition to another low emissions renewable industry.

Climate change is real and scientists say we have TEN YEARS to reduce emissions or it will spiral into CIVILISATION COLLAPSE. The time for denial is over. This proposal needs to be

rejected straight out. Immediately following, a State Conservation Area, should be gazetted for the 39,000 hectares, known as Stage 2 Gardens of Stone Reserve Proposal.

Please demand that Centennial Coal revise their amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area. They are so important to protect. For the last three years I have been involved in taking over 100 visitors to visit the Gardens of Stone region as a tourist destination. Sites such as the Birds Rock, pagodas, cliffs and the nationally endangered swamps are future visitor attractions, that can provide a sustainable additional industry to the Lithgow region. They must be protected. Please refer to the visitor plan 'Destination Pagoda' by the Gardens of Stone Alliance, 2019.

Once the Covid-19 pandemic is over, the Gardens of Stone region will be a much needed visitor destination for Sydney and restarting the tourism industry.

Upland swamps are vital for Sydney's drinking water of Sydney. Water security must be the priority in your consideration. Please do not allow the upland swamps to be destroyed as they are vital for Sydney's drinking water.

DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

For over 30 years, NSW citizens have called for the protection of the Newnes Plateau and called for its protection. This dates back to 1932 when bushwalking conservationist Myles Dunphy called for its protection.

Australia has lost so many of its rare upland swamps. This must not continue.

Australia has the worst mammal extinction rate in the world. Approval would increase extinction for the rare species that the upland swamps are dependent on.

The NSW government has a history of failing protecting NSW's rare biodiversity and this must not continue.

The Federal Government released a list of animals seriously affected by the catastrophic bushfires of 2019-2020. Sally Box, Threatened Species Commissioner has warned that some species (including dunnarts, frogs, water skinks, black cockatoos, lyrebirds, wallabies and pygmy possums) are now "much closer to extinction". Full assessment of the impact on individual species has yet to be confirmed in the Gardens of Stone region

Once destroyed, the swamps, will not come back. They must be protected. Swamps are a lifeline during drought for wildlife where this may be their only drinking water.

Mini-longwall mining methods should be applied instead of this intensive longwall mining proposal to protect this significant part of the Gardens of Stone reserve proposal.

It is time for the Gardens of Stone reserve proposal to be immediately gazetted as a State Conservation Area (that still permits responsible mini-longwall mining). A State Conservation Area would give the legislation to ensure that any mining would not damage the ecologically fragile surface areas.

The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

Nearly one billion wildlife was destroyed in the catastrophic bushfires, nationwide. Bushland needs to be protected to ensure the habitat is protected, so that wildlife populations have time to recover.

The Wolgan Falls must not run dry and so the proposed longwall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

The beautiful 'Wolgan Falls' must be protected, as a site for visitors to see and enjoy.

DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

It is essential that the World Heritage area to be fully protected.

In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

It is time for serious investigation of these compliance failures. How can the public have any confidence when Centennial's consultants have not identified nationally endangered plants?

For all the above reasons, the amended mine extension proposal must be rejected.

The time for destroying nature is over. We have so little left. So much is endangered. It is beholden on all of us to protect it for the future.

Again I urge that you reject the amended mine extension proposal. If approved it will be the death knell to pagodas, upland swamps, wildlife, birds and ultimately ourselves.

Yours sincerely

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Michael Connolly

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Maurizio Floris

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I live in the Blue Mountains and have often visited Lithgow and surrounds and am well aware of the value of the natural heritage of this area, especially the Gardens of Stone region. It is unique and has very high conservation values. It deserves to be protected for future generations and not be intruded upon by a coal mining project. This is particularly the case at a time when we have been made aware of the extreme risks from climate change and the contribution to these risks from burning coal.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of

metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

This past summer has seen the utter devastation of so many precious wilderness areas, and the loss of so much wildlife, that all surviving forest must be preserved. We cannot allow further loss of habitat to force our flora and fauna into extinction. Unprecedented bushfires have destroyed so much of the natural environment that it will indeed be a long and slow recovery, but there can be no recovery if this Centennial Coal project is approved.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Chris Byrne

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

Recent events in NSW have highlighted the absolute need to review all current coal mining applications. These include:

- The New South Wales Land and Environment Court rejecting an appeal from Gloucester Resources regarding the refusal of its development application for the Rocky Hill coking coal mine in the Hunter Valley, saying the mine would have significant social and environmental impacts;

- The known links between the burning of fossil fuels and the impact on climate change (as noted in the Rock Hill case);

- The severe drought of the past few years and the proven impacts of climate change on the increased number and length of droughts;

- The devastation of the 2019/2020 NSW bushfires on our natural environment and wildlife, with several major fires also impacting fresh water supply;

- The danger long-wall mining poses to workers and the environment as noted recently when the Metropolitan mine in Helensburgh was closed due to high levels of carbon dioxide and methane gas, which happens occasionally. A floor break in the long-wall tail gate (a crack in the roadway floor) contaminated the atmosphere with gases from seam below;

- The damage that long wall mining under water reserves can do as evidenced in the opposition to the expansion of the Metropolitan long-wall mining under the Woronora Reservoir - a major residential water supply. Mining activities under the reservoir could compromise the integrity of the water storages, potentially leading to leakages, and flow on environmental damage to the surrounding water table.

- The full impacts of underground mining operations below water resources will not be known for several decades, and changes in the geological structures below could continue well after the final coal has been extracted from the site. It would only take one fine 'hairline' crack to either release gas contaminants into the water supply and allow for leakages from surface water supply into substructures.

- The NSW Government granting of the Metropolitan long-wall mining under Woronora Reservoir without a hearing of the 11,000 signatured petition, is a travesty of government in NSW and its legality is being investigated.

I request that the Department of Planning, Industry and Environment (the DPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Michelle Jonkers

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I am opposed to the risk of damage to swamps, rock formations and other natural features on land that would be undermined and subject to subsidence.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely, Paul McDonald.

I've been fortunate enough to explore this area over the past couple of years, and even amidst the chaos of bushfires and now Coronavirus, it's critical that areas like this be protected as part of our natural heritage.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

I have been enjoying the Gardens of Stone over the past 20 years as a bushwalker and a lover of Australian flora and fauna. I believe that the value of the area extends beyond mining, and the public should be able to keep enjoying the natural beauty for recreation, valuable green space within easy reach of Sydney and to bring tourists to the regional areas.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to protect nationally endangered wetlands adequately, and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps (wetlands).

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe. It must be recalled that when burned coal releases twice as much CO2 to the atmosphere as gas, per unit energy obtained, so that coal burning anywhere is a particular threat to Australia's habitability.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area. The present proposal does not adequately address danger to the value of the site.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau. The applicant is essentially a known bad actor.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Dr Nicolas Rasmussen

NO WAY, DO NOT LET THIS HAPPEN!

Our Untouched native land is the most valuable thing we have in this country- not for exploitation of short term resources, but for the long term survival of our greater land and it's inhabitants.

Do the right thing.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency.

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.
- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.
- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.
- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.
- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.
- The current mining creates a huge mess of the Wolgan River already. The company should not be permitted to further destroy this beautiful public area for the short-term profit of a few investors.
- I request that if any consent is issued, then it must be reviewed every 3 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.
- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.
- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.
- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.
- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced or eliminated and all facilities located away from sensitive areas.
- The already polluted Wolgan Falls must not run dry and so the proposed longwall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes. Really, it should simply be rejected.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps. It will emit methane, a highly polluting Greenhouse Gas, it will produce coal, also a producer of green house gases. Unless we stop opening new coal mines, we will be unable to stop wrecking our climate and transition to 100% renewable energy.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Lynette Sinclair

This is your opportunity to make significant changes and improvements to how we care for and manage our environment, these are essential and spectacular bushland areas. The community is actively taking a stance here, participating in the consultation process, bringing our legitimate concerns to you! Do not dismiss this, see what is written here, make the effort to be fair and considerate of all the facts! Join the dots, see how connected and reliant we all are to a healthy and strong natural environment. I'll say it again, this is your opportunity to make decisions that will actually protect environment now and into the future.

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

Please stop the mine extension!

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort

not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Marilyn Peters

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

- The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

- The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

In the face of ever-increasing threats to Australia's productivity and national happiness this extension has minimal (and short-term) benefits yet incurs extensive and long-term damage. This is not smart business nor smart use of our under appreciated intact natural resources.

Endemic swamps cannot be offset. Such trades are rarely (if ever) of equal ecological value and do not take into account the need for continuity of habitats. It is worth remembering that the Gardens of Stone and surrounding natural areas are a very small fragment of the area of forest NSW and Australia once had. This does not mean it is insignificant. This means it is vital to maintain what little we still have left so that the ecological services that sustain the living planet may continue do their job for us.

The adjacent Greater Blue Mountains World Heritage Area (GBMWHA) cannot be adequately preserved with the extension of operations so close to the boundary. The overlying landscape - while not under such 'protection' that world heritage status provides - in fact contains even more unique and diverse ecosystems than many parts of the GBMWHA for its area. It also contributes disproportionately more to the health of the downstream environments that are within the neighbouring national park. This defacing of water catchments and little-understood subterranean environments is unacceptable and unjustifiable in the face of current rapid climate change.

Lastly, there are countless alternative economic opportunities in this region more conducive to long-term economic and ecological stability. This extension will only serve to jeopardise such opportunites. With a more difficult and unpredictable future (just look at COVID-19) natural assets as 'rich' as the wonders in the Newnes Plateau/Gardens of Stone area will, and are already, sought out by an increasing number of people. The least that can be done for the communities of Lithgow and surrounds is to preserve such assets for ourselves and those who come after us.

I am 21. I have been visiting this area since I was old enough to be taken. I am not indigenous and yet I find myself inextricably linked emotionally and physically to the place. This landscape builds pride and a strong community, yet this extension can only damage this. It is not just a place that bushwalkers find invigorating. Some areas are suitable (and already in use) for other lower impact and well managed recreational activities. Importantly however, the intact nature of the area under threat is appreciated by ALL who visit and takes precedence over short-term gain for a relatively small number of people and wealthy business(es).

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely, Barry Williams

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Rebecca Haydon

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Paul Daniel

I have not made political donations or gifts totalling $1,000 or more in the last two years.

I have visited this area over many years. It is a rich and beautiful environment and MUST NOT be destroyed by further mining which will destroy the area, the water and the flora, fauna. Not to mention the disastrous emissions by burning more coal, pumping more Co2 into the atmosphere, therefore jeopardising the next generations with the worst effects of climate change!

Please recommend rejection of this proposal.

Coal mining is old technology. It is polluting and damaging to the environment and a late contributor to green house gas emissions. We now have clean enfeebled generation methods available, which are the way of the future. Invest in the future not the dark ways of the past that have proven to be unsustainable. The last thing this planet needs is more coal mining.

The GArdens if Stone area proposed to be mined is precious and irreplaceable. Leave this natural wonderland alone And generate electricity using Renewable technology.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

J Y

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Darren Mckenzie

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

You can't rebuild it, restore it or fix it once you break it, so just don't. Consider your duty of care not only to the environment and economy, but also to the recognised flora and fauna that requires protection, the people at ground zero and the long term effects of this application for the next century.

Please recommend rejection of this proposal.

Yours sincerely,

Emily Van Reason

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Alec Cobbold

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

It is outright archaic and imbecilic to still be pursuing fossil fuels, especially in a region of such ecological sensitivity. Rather, funds or opportunities should be directed to renewable energy technologies which would be less invasive and be more cost effective.

I have not made any political donations in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Re: Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

Over the past 10 plus years I have walked and photographed so many of the incredible geographical features that do not appear anywhere else in Australia. I have also walked and photographed the massive cracks directly caused by underground mining, It grieves me as an Australian to see our natural heritage exploited for short term gains. Yes short term, what will my grandchildren's, children think.

With the world's technology turning to renewable energy sources, Why is it that a developed nation such as ours, is committing ourselves to last century ideas.

Think wisely as coal is short term and our environment is long term.

I have not made any political donations

Please recommend rejection of this proposal.

Regards

Brian Fox

Dear Sir/Madam,

I strongly object to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension due to fracturing of the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- If this proposal is allowed to go ahead, Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- The use of coal for power generation is a totally outdated, damaging and uneconomic strategy.

It should not be supported in any form.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I am a geologist. I am not anti-coal, but I am pro-wilderness and believe the benefit of extraction of this particular resource is outweighed by the environmental risk associated with it.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Alison Dines

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Proposed plans must protect this significant part of the Gardens of Stone reserve.

- The clearing of 50 hectares of public forest for additional roads, ventilation and pumping facilities will seriously impact natural regeneration after the 2019/2020 fires so all facilities must be located away from sensitive areas.

- The Wolgan Falls must not run dry! So the proposed longwall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

- The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

- The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

For the Please recommend rejection of this proposal.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Bera Simone

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout. The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Susan Goddard

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Coal should be on the way out. To even consider putting a coal mine in the wolgan valley is insane. If this does go ahead despite the objections, the people who made it possible for this to go ahead should be remembered for the devastation they allowed to occur.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Ben Wilkinson

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Luke Prangell

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Now more than ever, I believe this mine should not be approved at all, we are facing a dim future with our water,land, plants and wildlife being destroyed. The health of people and wildlife is going to be compromised with more destructive mining. The environment needs to be protected for the future, a clean healthy environment is the only way to ensure a healthy economy and increase jobs.

Yours sincerely,

Rhonda Green

I live in the Blue Mountains and hike all through the national parks including the Gardens of Stone. The world is warming up, we saw this last year with catastrophic bushfires. This is absolute madness extending the coal mine goven the science that coal contributes to global warming. It will have significant enivronmental impacts on the Gardens of Stone- a special and unique area.

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

There are two main reasons why this proposal must be rejected.

1) I am a bushwalker and a published author. Through many years of bushwalking in this unique natural area and writing about it, I know it intimately. It is full of incredible natural features that must be preserved as part of our national heritage.

Below is a list of key bushwalking destinations in the project area. They can all be irreversibly damaged and/or destroyed.

. Wolgan Falls

. Wolgan Gorge and Wolgan River downstream

. Wolgan Loops and Point Green

. Cathedral Cave

. Birds Rock Flora Reserve

. Birds Rock Cave

. Convolution Creek

. Tagine Point

. Carne Creek downstream

. Diamond Cavern (within 100 m from the project area)

. The Cracks of Doom (within 100 m from the project area)

As well as those, there are several national heritage listed high level swamps that will be ruined. We are also aware of at least three Aboriginal occupation shelters in the project area.

2)The second reason that this project must be rejected is that coal must be left in the ground. I hope we have all learned enough from the devastating bushfires of last summer. The NSW Government would be making a very shortsighted and unpopular decision if it allows a new coal mine within 2 hours from Sydney, to be used for the next 33 years.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Chris Huxley

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

At a time when we can see the effects on our environment, of reduced pollution levels worldwide, I do not see the benefits of any large proposals going ahead.

We have the ability to ensure proper procedures and protections are given priority. Now is a time to make all aspects of big industry and corporations transparent. We can not return to business as usual. It is a time for corporations to adapt and grow or stagnate and sink to be replaced by others. This is not a time to madly approve projects before the axe falls. Like many industries adaptation and innovation must become the norm to ensure future survival of corporations but also our communities, heritage, biodiversity, and even life.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Paul Cooke

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Donna Tylor

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

We need to be rapidly phasing out coal mining if we are to have any hope of keeping global warming to under 1.5C. Climate change threatens to destabilise out entire planetary ecosystems and cause global catastrophe (not just to humankind but to all life on the planet. This mining extension also directly threatens the delicate ecosystem of the Gardens of Stone region and should not be allowed to go ahead. Once this area is gone we can never get it back. I call upon the DoPIE to do the right thing by current and future generations and reject this proposal.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

The area effected by the mine is a very unique and special place, please don't spoil it.

Also the waterways in the area are needed for the livelihood of many animals and birds, as well as giving life to the landscape. As we seen the devastation of diminished water during drought and subsequent bushfires I believe it is vital to learn from our mistakes, and keep our natural areas healthy and intact, this means no mining!

Please recommend rejection of this proposal.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Harry Smith

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

From a personal perspective, I am so disappointed to see that these projects are often given permission despite the declining state of our environment. I ask myself again and again, why these corporations refuse to acknowledge the affects of what is happening to our world. We all know the answer.

Where does the responsibility of the ongoing destruction lay? Is it with the company, or the people who give them permission to carry it out?

Gardens of Stone is such a unique area, and like a lot of our Park areas, very vulnerable. National Parks need protection, not undermining.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

There are better ways to mine for coal and this proposal does not find a reasonable balance between mining and the environment. Upland swaps are home to the highest levels biodiversity in the Greater Blue Mountains region.

have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Grant Purcell

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. It is unconsciable that the environment be placed at risk for short term gain as that will eventually impoverish the State of NSW. A degraded environment leads to reduced rainfall, reduced agricultural output and increased climate damaging temperatures.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Nicholas

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. I have witnessed first hand the damage done to the river delicate systems in this area by current operations of Centennial. It beggars belief that the NSW Government could even consider such an application when looking at the record of this business. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps, causing even further damage to the creek and river systems.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Having the 2019 natural disaster experience across whole Australia loosing so much of our forests and presious natural habitats, I believe protection of our Australian nature should become the priority above all and no more projecst leading to more damage to the nature should be approved, particularly expanding the fossil fuel mining. Fossil fuels burning is proven to be a major threat to the climate around the whole planet and instead of opening new coal mines Australian government and authorities should stop giving approvals to coal mines and instead start supporting sustainable way of using renewable sources that our nature is offering in abundance.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Harrison Carr

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Doug

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

This once again is another coal mine company, putting incredibly precious land at risk, endangered animals at risk and human lives at risk, all for another evil mining company to make money off something that isn't there's, it's honestly sickening. You should be ashamed of yourselves if this goes ahead, the area doesn't need more poison in the area which this would create. I honestly could cry how upsetting this would be. Where is the line going to get drawn on big business destroying this precious country for more profit they don't need!!!! I have a farm in the area and we don't need anymore black coal dust in the air.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I am shocked that the NSW government is allowing this project to be considered for approval at the this time when urgent action to stop fossil fuel mining is imperative. We have just 10 years maximum to slow global warming from reaching catastrophic climate change, to do this we must faze out fossil fuel mining, please refer to the most recent IPCC report 2019. Equally the care and protection of our environment is imperative to ensure it's ability to store carbon. Healthy bio-diverse ecosystems are the best carbon sinks we can have to achieve this. There is no catchment area, no river, no Upland Swamp that we can afford to sacrifice to the damage and pollution of coal mining. Please do not approve this mine expansion.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Annie Marlow

I believe any important and unique geographical land forms should be protected and not be part of any mining projects incursions

I also believe strongly that where there are water catchments,sensitive goundwater areas,rivers, floodplains,sacred sites these should be left for posterity and NO mining should take place near or in those areas

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Tim Barber

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I am horrified to hear about the danger this amazing place is under due to the mining proposals. Places such as this should never be messed with. What rude, inconsiderate, industrial arrogance. You have no right to mess with this part of nature and I object.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

We must reduce Green House Gas emissions, to protect our climate. To do this we have to transition to 100% renewable energy, not produce and burn more fossil fuels. Renewable energy has the added benefit of being cheaper than fossil fuel energy and will create more jobs than fossil fuel mining.

Please recommend rejection of this proposal.

Yours sincerely,

Richard Stanford.

Coal mining in the face of the devastating impacts of climate change is reckless. Further to that, the mining itself will have direct and tangible impacts on the nearby World Heritage Area. Which is currently recovering from the devastating impact of the recent bushfires, which were exacerbated by a warming climate.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I am a member of several bushwalking clubs. I have walked in and around these areas extensively. These are areas of the Newnes Plateau that are true wilderness areas and that need to be protected. Coal power stations need to be phased out sooner rather than later. mining this area and supporting ageing infrastructure that will likely be condemned in the coming decade or so, is short-sighted. The area will never be returned to pristine if fractures occur, rivers and swamps drain, etc. We colloquially call this "pagoda country"; the pagodas will be destroyed if land shifts. These are such a unique feature of this area.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Robert & Ann Cantwell

I go bushwalking in the Gardens of Stone pagodas areas and feel strongly about the extension of mining, particularly for the next 3 decades! If climate science is correct, and why should it not be given the overwhelming evidence from a multitude of different ways of looking at the effects on ecosystems, then we should err on the side of caution. Not throw caution to the wind, as governments are prone to do in favour of big business against social gain. Plant ecosystems do not just spring back - they can take more than decades to come to an equilibrium, and this new equilibrium in swamp areas will never be the same. And rocks - once fractured they can never get put back together again. The rock formations in Gardens of Stone are unique and spectacular!

Yours sincerely,

Barbara Junghans

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

The Newnes Plateau is our last untouched, natural wonder. Lithgow tourism depends upon it as an important destination. What is offered environmentally in this area is irreplaceable and if such a proposal were to go ahead, so many important natural features would be destroyed or changed forever. Coal-fired power is no longer the way forward. We live in a world of climate change and we should be doing everything we can to offer protection to the natural environment.

The following are key examples of permanent damage if this proposal were to go ahead:

Five endangered swamps and the wonderful fields of boronia and other wildflowers in those swamps will be destroyed.

Key populations of nationally listed animals will be reduced or wiped out.

The Wolgan River would be drastically reduced in flow and this affects the swamps and their fauna and flora.

Key rock formations will be fractured or destroyed.

This is part of our National and International World Heritage Area.

This proposal must not be allowed to go ahead. We have permitted enough permanent environmental damage, without adding more to serve a purpose which should be replaced with renewable energy practices.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Catherine Weaver

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Coal mining under the Sydney Sandstones has caused widespread environmental damage, over and over again. Allowing the continued extraction of coal from under this geological formations needs to be phased out. To open New areas to this process is environmental vandalism.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Ian Sutton

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

It is utterly inappropriate in this time of climate change crises that our governments are still supporting development of more fossil fuel mining.

Which bit of climate change does the NSW government not understand? Oh yes the cronies subsidising their mates bit....

The economics of coal are crashing, the industry is saying so itself, they are transitioning to renewables. But NSW is in the dark ages.

Stop sucking on the corporate teat. And make some hard long term sustainable decisions instead of continuing to subsidise fossil fuels at the public and environmental expense.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Ian Henderson

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. - For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

this proposed Angus Place mine extension due to unacceptable impacts:

Five endangered swamps and the wonderful fields of boronia and other wildflowers in those swamps will be destroyed – (TriStar, Twin Gully, Birds Rock, Crocodile and Trail 6 will be hydraulically impacted by the mine);

Key populations of nationally listed animals - the blue mountains water skink and the giant dragonfly – will also be lost due to the swamp damage;

Water flows in the Wolgan River that pass through the World Heritage Area and over Wolgan Fall will be diminished, and Carne Creek will also lose its pristine flows – (Carne Creek is a key feature of the One and Only Wolgan Resort, eroding its green cachet);

The "protected" Birds Rock Flora Reserve shall be undermined, and this spectacular rock formation shall be fractured;

Cliffs will collapse and pagoda rock formations cracked in the mining area; and

Grandfathering the Angus Place mine is a transparent attempt to block social adaptation to climate change by locking in coal consumption.

"Angus Place mine proposes to send up to 30 megalitres of mine water a day that it will drain from Newnes Plateau to the new Springvale Water Treatment Plant that will service the water needs of the Mt Piper Power Station. This water management and the offset money for heritage damage can not compensate for the loss of national and international heritage," Mr Muir said.

"Once the coal industry is gone, Lithgow will wonder why it did not do more to protect its cultural and natural heritage assets of the Gardens of Stone region upon which their tourism future rests. This is the last big mine proposal in the region, and more needs to be done to protect the natural environment than the steps Centennial has so far made", he said.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Lotty

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

As an active member of the Australian Plants Society NSW committed to protecting our natural environment, I am writing to ask the Department of Planning, Industry and Environment (the DoPIE) to recommend refusal of consent.

I am very concerned about the impacts of this proposal on the natural environment and it clearly requires further assessment and modification to reduce environmental impacts.

For instance, in the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites within the proposal where these federally listed plants occur, highlighting the weakness of the company's environmental assessment.

Centennial Coal has not modified its proposal to adequately protect nationally endangered swamp.

I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the proposed mining area.

DoPIE must not allow Centennial Coal to repeat the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

The excessive clearing of 50 hectares of public forest for additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

The Wolgan Falls must not run dry and the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

DoPIE must require that pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area, not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I strongly urge your consideration of the impacts to the natural environment that would occur due to the effects of mining in this area and also to the greater global impact from coal fired power generation.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Carla Parish

Parramatta NSW 2124

Dear Sir/Madam,

Objection : State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I am writing as someone who values our beautiful wilderness/national park areas and also as a citizen deeply concerned about the projected impacts of global warming will have on Australia and Sydney's precious water resources. The recent horror of megafires and our ongoing drought have brought these concerns into sharp focus for me.

Understanding both the well documented and argued need for our State and our country to radically decarbonise (ie no more fossil fuel extraction and rapid move to renewable, sustainable energy) I can see no valid argument for enabling a coal company to extend its mining operations, especially not if they are in an area of natural beauty and one which supports critically important water resources.

And I believe it is negligent, bordering on criminal, to even consider allowing extension of longwall coal mining into an area of critically important swamp land, understanding the vital role swamps, forests and creeks play in Sydney's water storage system.

I therefore ask the Department of Planning, Industry and Environment NOT to consent to Centennial Coal's Angus Place mine extension proposal. The company has a record of damaging fragile environments, and does not appear to have done the work required to ensure the protection of the nationally endangered swamps now being threatened. It can not guarantee that its extension, through longwall mining and pollution/contamination arising from this activity, will not lead to damaging the critical sandstone strata which support the swamps, waterways and other fragile ecosystems including falls, forests and cliffs, in the proposed mining area.

This company has acted irresponsibly in the past, failing to comply with its environmental obligations - there is no reason to trust it in the future.

Please recommend that this project is denied consent and is sent to the IPC for a rigorous review.

Thank you for considering my submission

Sybille Frank

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal. Just think about how you will feel when Sydney faces its next crippling drought, the dams really do run dry and fire ravages the

degraded bushland and suburbs... and you know your decisions now, contributed to this horror. And think of what you will tell your children about your role in allowing this to happen!

Yours sincerely,

Sybille Frank

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps.

This area is of national significance in its beauty and uniqueness. I urge all ministers to drive around this beautiful area and stop and look in respect. We will have more coal mines but we will never have another living system as magnificent as this area. This wilderness is of more value to our country as a living ecosystem of trees and fresh water and tourism for our future.

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.
- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency.

Australia and the world need another coal mine about as much as we need another Coronavirus. This insane race to dig up coal before it becomes illegal is putting profit before the lives of our children and their children.

I am sick and tired of huge mining companies, often (usually) foreign owned, ripping up our countryside and denying us access to our natural heritage. Profits from this pillaging do not benefit our country, rather a small number of individuals and foreign entities. The small number of jobs created do not warrant the destruction of our environment and the future catastrophic legacy that this continues to build.

As a result:

- I oppose any new coal mines in NSW
- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.
- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- In summary, I believe the one extension will have a devastating effect on the environment, including pagodas, caves, Wolgan River and Carne Creek catchments, as well as many heritage-listed highland swamps.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Tom Zubrycki

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longwall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

write an objection to the Planning Department

You may edit this guide to put your concerns to the Planning Department (DoPIE) in

your own words. Once you are happy, press submit. If you want the Gardens of Stone Alliance to keep you up to date, then please select that option at the bottom of this form.

We are asking for an Independent Planning Commission review of this proposal. The Alliance strongly objects to the proposed grandfathering this mine consent until 2053, as if there was no climate emergency and coal-fired electricity was safe. The proposal seeks more intensive coal mining than in the orginal 2014 proposal. Unless drastically amended the mine extension will seriously damage core values of the Gardens of Stone region.

Help to secure adequate protection for the Gardens of Stone region, please make a submission to the Planning Department before 5pm, Tuesday April 28, 2020.

Further details regarding the Centennial Coal's mine amendement report.

Read about what the Colong Foundation thinks of the new review for the Augus Place proposal (media release).

Some additional points you may wish to mention in your submission (you can amend the form below):

The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

After the severe drought our state has been through, activities that damage our waterways need to be highly controlled. We can live without this mine but we cannot live without water.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Emma Roberts

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Mining Projects,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

The Department of Planning, Industry and Environment (the DoPIE) must not consent to the Extension because Centennial Coal has not modified the Angus Place mine extension proposal enough to protect nationally endangered swamps. Ensuring its consent until 2053 will prevent the energy sector from dealing with the very present and worsening climate emergency.

- The mine extensionwill fracture the sandstone strata supporting the nationally endangered swamps.

-Any consent must be reviewed every year with a possibility of immediate cancellation when environmental damage has occurred such that a future NSW Government can end coal-fired electric power as the public increase their understanding of the effects and causes of the climate catastrophe.

- Centennial Coal must revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

-DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

-Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

-The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

-The Wolgan Falls must not run dry and so the proposed longwall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

-DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

-In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

-Thus the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Erin Evans

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata. I have experienced this damage first hand in the mid 1990s while in the bush near Gardiners Gap directly above the longwall mining operation of the Angus Place Colliery. The rocks were shaking and cracking as an a large earthquake; large fracture lines appeared through pagodas and in the road on which we were walking. Within three days pagodas fell into valleys and large rock slides were evident. At least one Aboriginal rock shelter with stone tools was obliterated.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- I oppose the mine extension as the fracturing of supporting sandstone rock will seriously impact on drainage lines in the area, streams will disappear underground and the nationally endangered swamps will be deprived of sustaining water and may completely dry up and be lost.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau. The continued existence of many unique and endangered plants and animals is being seriously threatened. Energy can come from the sun but destroyed complex ecosystems cannot.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- Carne Creek is just one example of a stream system flowing from the Newnes Plateau that is associated with an extensive and stunning dry canyon system with dramatic evidence of ancient water flows. Vegetation associated with such canyons depends on undamaged landforms and unhindered water flow to survive.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to allow for independent assessments of geological and ecosystem damage and enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

I have not made political donations or gifts totaling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes. Additionally, with bank

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

John Brady

Keep coal in the ground.

Look at at the beauty of the natural environment and preserve that. Don't destroy and pollute. Find a better way to create energy.

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Helene Zampetakis

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years. Coal needs to phased out and there should be no new mines or leases granted if we wish to honour our agreement to the Paris accord to keep global temperatures below 2c above normal. On top of this we should be minimising other forms of particulate pollution. Renewables are cheaper to build and provide cheaper power and don't destroy the natural environment permanently as a coal mine does. This is 19th century thinking and technology. We can do so much better than that. Further I would like to add that this particular part of Australia is stunning full of natural wonders and wildlife. This should be preserved for all time as a national park, not destroyed so we can have electricity for only 33 years. To allow this mine to go ahead would be tantamount to environmental vandalism at it's worse. It would be a moral crime, committed by those who are ethically bankrupt, and if the go ahead was given, i can assure the applicants the battles have only just begun, and it will be many years, if ever, before they ever turn a sod of soil

Please recommend rejection of this proposal.

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Dr Rosalyn Hunt

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Ben Boslh

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

Humans rely on Nature. You can't deny that. It's a fact. You want to destroy the fundament for coming generations. How would you justify your actions to them? Start investing in something that has a future. That is renewable and doesn't lead to a dead end. Please start to think in longterm - not short term. Coal is outdated. Coal will come to an end at some stage, Wind and Sun won't. I also strongly suggest you pack your tent and experience this incredible and unique area yourself. Understand that there are not many areas like this we haven't destroyed yet left and why it is so important to protect it.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

It is absurd, disgusting and sad that this proposal is even being considered.

Please, for all of the reasons listed above and for common sense and human decency, please, recommend rejection of this proposal.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Again, please recommend rejection of this proposal.

Yours sincerely,

Joshua Newham

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent.

I'm sure that the many negative impacts of this project have been drawn to your attention already and I do urge you to take these seriously.

However , I would also like to point out that in general, this project seems extremely short sighted for the region.

Look around the world. Look at the confirmed science of climate change. Coal is on the way out. Should Australia be change leaders and innovators or should we be stuck in tired old mindsets?

Areas like Gardens of Stone have potential to raise our region's profile as an eco tourism and adventure region. We should be investing in that kind of infrastructure. Do something brave and different.

I know that you can think of a more creative project, You don't have to be sell outs and approve this.

Do something amazing and historic that will make you Be remembered. go down in history as the ones who went out on a limb and made a brave decision to turn down the coal mine and invest in something bigger and better.

In 100 years time, nobody's grandkids will be impressed by the approval of a coal mine Extension. We will look on it as a backwards vestige of times when humans didn't know better than to pollute their own environment.

You are smart and compassionate enough to know what the right choice is . I trust you to make it

Best regards,

Amy Wilson

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I am deeply concerned that the Angus Place mine extension will destroy and forever damage this amazing natural place. This area holds significance to many people in Australia as well as significant environmentally and ecologically. I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas. Clearing of this type especially in the wake of the 2019 devastating bushfires is not only negligent it is completely insensitive to the environment and wildlife that needs sanctuary to be able to recover.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of

metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The National parkes in The blue mountains are a valuable natural resource that I and many others enjoy for their intrinsic beauty. It is very important that these are kept for future generations to enjoy in the same way.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Myall Bratter

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Centennial Coal has caused innumerous environmental breaches as a result of their mining activities.

It has to be seen to allow this operation to proceed would be totally reprehensible given the impacts to this heritage classified area. Impacts to the swamps, the water systems, the ecology, flora & fauna, & the unique irreplaceable landforms

To approve this proposal, would also be seen as the death Knell to any attempts to introduce good policy for a cleaner, more environmentally sustainable future & would surely be viewed with disbelief by other countries trying to do the responsible thing by the planet we live on !

Especially for future generations....

I have not made any political donations or gifts .

Please recommend rejection of this proposal.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I oppose the above mine extension as it will have a devastating effect on pagodas, caves, Wolgan River and Carne Creek catchments, and it will fracture the sandstone strata supporting the heritage-listed highland swamps.

I request that the Department of Planning, Industry and Environment recommend a refusal of consent for the above project.

Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect our nationally endangered swamps. It has sought permission to dig the mine for the next 33 years, which will prolong our necessary transition from coal to cleaner energy sources and address climate change.

I therefore request that if consent is given, a condition of consent must be to review the extension every 5 years with a possibility of cancellation from 2025.

Due to the extent of mining impacts and duration of approval being sought, the amended Angus Place mine extension proposal must be subject to an Independent Planning Commission hearing, review and determination process.

The company's environmental record needs to be taken into account. Its failure to undertake surveys of nationally endangered plants and the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

Further mining threatens to

1. fracture Birds Rock, a large sandstone monument
2. impact on swamps and streams for over a kilometre
3. drain the Wolgan River and its swamps resulting in the demise of the spectacular Wolgan Falls
4. increase mining-related surface subsidence from 1.90 metres in Centennial's 2014 proposal to 2.25 metres
5. fracture sandstone rock and damage swamps much more than previously.

Please require Centennial Coal to revise this amended proposal to prevent damage to all the above.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Kathy McKenzie

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

The Gardens of Stone is one of the most unique natural wonders in NSW, and indeed Australia, and I'm deeply concerned about the proposal to extend the Angus Place coal mine in this time of unprecedented climate change. This could be a world class tourist attraction that would bring visitors to the Lithgow area and provide an alternative economy for this economically distressed area, but instead it's proposed to damage this pristine area irrevocably through short-term mining. Short term gain and long-term pain.

I'm writing to request that the Department of Planning, Industry and Environment (DoPIE) recommend refusal of consent for Angus Place Mine Extension, because Centennial Coal has not modified their proposal to adequately protect nationally endangered swamps, and has also sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting these nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every year with a possibility of cancellation from 2025, to enable future NSW governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- If the proposalMini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of

metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Laila Ellmoos

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The covid 19 situation should be a time that our leaders reflect on what's important like many of us are doing at home. There have been warnings, I can remember first learning of these when I was around eight years old. I am now forty years old. We were taught that as our environment is corrupted we would experience more fire, floods and disease. This is exactly the scenario that is playing out in front of our eyes. To wilfully chose to relax environmental regulation and allow further destructive practices in environmentally sensitive areas such as the Gardens of Stone tells me our leaders are acting in an incredibly opportunistic fashion. This feels exploitative of a public health situation, not in line with our democracy and short sighted in terms of health economics and votes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

Once this pristine area is damaged no amount of money can remedy the site. We should be investing in renewable energy not extending coal mines that contribute to catastrophic bush fires and climate change that directly effect this unique area.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Simone Young

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

My objection to the State Significant Project 5602 – Angus Place Mine Extension Project (APMEP) - Amendment Exhibition

I request that the Department of Planning, Industry and Environment (DPIE) recommend refusal of consent to the above-mentioned amendment, on the following grounds:

- I oppose the mine extension, as it will fracture the sandstone strata supporting nationally endangered swamps. Centennial Coal's own published Amendment Report (06.12.19) concedes that "it has been found that mining directly beneath lineaments or significant geological faults has triggered changes to hydrology in swamps overlying the (adjacent) Springvale mine". DPIE should not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau. They identify that "Subsidence-related impacts are expected at Tri-Star Swamp, Twin Gully Swamp, Trail Six Swamp, and hanging swamps within their catchments." In the case of APMEP, it is not possible for them to avoid further catastrophic damage to nationally significant endangered swamps without rendering their proposed extraction areas economically unviable. They therefore propose a 'swamp offset strategy' to mitigate against their impacts, but these are irreplaceable natural features demanding the highest order of protection. They cannot be destroyed and then 'offset'.

- The proposal also threatens subsidence and fracturing of the bedrock of Wolgan River and Carne Creek, as well as under cliffs and pagodas on Newnes Plateau causing "permanent loss of some valued environmental assets" and thus "reducing visual amenity for passive and active recreational user groups". Sheer madness that will bring campaigners for the environment out in unprecedented numbers. Centennial Coal have already reported that "Fracturing and buckling of the exposed bedrock occurred along Kangaroo Creek with widths typically ranging between 50 mm and 100 mm. Surface cracking on the valley sides of Kangaroo Creek had widths ranging between 10 mm and 110 mm. Localised cracking also occurred with widths up to approximately 200 mm." DPIE must require that the Wolgan River and the pristine Carne Creek, which flows through the Greater Blue Mountains World Heritage Area, and past the Wolgan Valley Resort, be protected from water losses and contamination from the proposed activities. Similarly, the spectacular Gardens of Stone, a World Heritage area featuring stunning rock pagodas, sandstone cliffs and canyons, is an international treasure that must be preserved for future generations, not trashed for short-

term profit. Centennial Coal say “The maximum predicted vertical subsidence for the APMEP is 2250 mm”, that’s over 2 metres! In addition to the conventional subsidence movements that have been predicted, “it is also likely that far-field horizontal movements will occur outside of the mining area. “The far-field horizontal movement at a distance of 1 km outside the mining area is predicted as 80 mm based on the 95 % confidence level.” This severity of surface disturbance will bring down pagodas, cause rockfalls (threatening Aboriginal cave sites in the process), and surely decimate ecosystems following the draining of swamps.

- The proposed mine extension would destroy the habitat of some ‘supposedly protected’ endangered flora and fauna. The Temperate Highland Peat Swamp on Sandstone (THPSS) is home to at least three nationally endangered flora species that have been recorded within the mining area and which would be subject to impacts from the planned subsidence: (Carex klaphakei (Klaphake's Sedge); Persoonia hindii; and Veronica blakelyi.) In the seven years since Centennial Coal’s consultants identified the need for targeted surveys of these nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company’s environmental assessment. Centennial identify at least another twelve threatened plant species likely to be affected, as well as reporting “There may be some die-back of fringing aquatic vegetation following flow diversions and drainage of pools”, and that “subsidence-induced rockfalls could damage some vegetation.”

- The fauna that depend on the plant communities under threat would also suffer degradation. These include the endangered Blue Mountains Water Skink (Eulamprus leuraensis) and the endangered Giant Dragonfly (Petalura gigantea). I quote their report again: “Aquifers that provide habitat for stygofauna are expected to be impacted by reductions in groundwater levels following mining induced groundwater depressurisation. Localised impacts to aquatic habitat and macroinvertebrates will occur following predicted mine subsidence and associated fracturing in streams and ephemeral drainage lines adjacent to and overlaying the proposed longwalls.” Their proposal to ‘offset’ upland swamps damaged by coal mining is a perversion of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

- No additional Aboriginal heritage or Historic heritage surveys have been undertaken within the amended Project Application Area since the preparation of the 2014 EIS. How does that sit with the regional Aboriginal Cultural Heritage Management Plan? I would like to hear clearly what the traditional custodians of this land feel about the proposed amendments, before any approvals are considered further.

- New South Wales governments have adopted the principles of Ecologically Sustainable Development (ESD) via the Protection of the Environment Administration Act 1991. ESD is an internationally recognised concept, which has been adopted by the Commonwealth and all States of Australia. The proposed amendment to APMEP clearly fails to meet the principles of this Act.

The Precautionary Principle has not been applied, since their plan depends on knowingly causing irrevocable damage to State significant natural habitat, even beyond the boundaries of their project area. Conservation of biological diversity and ecological integrity should be a fundamental consideration in environmental planning and decision-making processes. The Angus Place amendment proposal is clearly prepared to trash this principle wholeheartedly.

The only way that it could be economically viable is if we allowed them to flout this ESD principle entirely, instead of making every effort to save these natural wonders bequeathed to us across the ages. This proposal to enlarge and extend coal-mining at Angus Place colliery shows contempt for the principle of Inter-generational Equity at a time when the world is faced with a climate catastrophe of accelerating anthropogenic global warming. Our grandchildren's grandchildren should be able to enjoy the natural wonders of our environment. This proposal compromises the ability of future generations to meet their own needs. The present generation should ensure that the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations.

- Centennial Coal has sought to grandfather its consent until 2053, which is an ambit claim pushing out beyond the time when coal should be a feature of Australia's energy mix, beyond the life expectancy of Mount Piper Power Station, beyond when exports of thermal coal will be socially or politically acceptable. It would be a failed and stranded asset by that time, without the finances perhaps to fully remediate the site. Angus Place mine has been moth-balled since 2015 (care and maintenance) and their adjacent Springvale mine is already experiencing a crisis of low yield and quality, even before it is due to close in 2024. The eight years remaining on Springvale's consent should be long enough for a transition to a post-coal economy in the Lithgow area, provided that State and Federal Governments show leadership in providing opportunities (for the four hundred plus workers) to receive re-training into sustainable emerging industries. Social Equity demands that a plan be formulated urgently to help Lithgow move beyond the dinosaur of coal exploitation to a more diverse and resilient economy.

- I note that Centennial Angus Place say that the economic viability of this proposal, even in the short-term, depends on them being allowed to:

increase the long-wall void width to 360 m wide (causing gross subsidence and decimation of surface features); destroy up to 50 hectares of bush on the Newnes Plateau (which they don't own – we do); increase vehicle traffic on roads on the Newnes Plateau during construction causing impacts to recreational amenity due to traffic, noise, dust and temporary access restrictions for user groups; closure of their onsite wastewater treatment system in favour of connection to the Lithgow City Council main sewer line (really?!) Their desperate plan to extend the life of these mines is contingent on unreasonable exploitation or destruction of assets which don't belong to them. NSW Department of Planning, Industry and Environment is responsible for weighing up these conflicting interests. I trust that the interests of the whole of society, present and future, are being carefully considered.

- I request that if any amended consent is issued, then it must be reviewed every five years, with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired power generation as soon as possible, to help stop the growing climate catastrophe.

For all the above reasons, I request that the amended mine extension proposal be subject to an Independent Planning Commission review process.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Steve Garthwin

29 Hughes Avenue, Lawson NSW 2783

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

My objection to the State Significant Project 5602 – Angus Place Mine Extension Project (APMEP) - Amendment Exhibition

I request that the Department of Planning, Industry and Environment (DPIE) recommend refusal of consent to the above-mentioned amendment, on the following grounds:

- I oppose the mine extension, as it will fracture the sandstone strata supporting nationally endangered swamps. Centennial Coal's own published Amendment Report (06.12.19) concedes that "it has been found that mining directly beneath lineaments or significant geological faults has triggered changes to hydrology in swamps overlying the (adjacent) Springvale mine". DPIE should not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau. They identify that "Subsidence-related impacts are expected at Tri-Star Swamp, Twin Gully Swamp, Trail Six Swamp, and hanging swamps within their catchments." In the case of APMEP, it is not possible for them to avoid further catastrophic damage to nationally significant endangered swamps without rendering their proposed extraction areas economically unviable. They therefore propose a 'swamp offset strategy' to mitigate against their impacts, but these are irreplaceable natural features demanding the highest order of protection. They cannot be destroyed and then 'offset'.

- The proposal also threatens subsidence and fracturing of the bedrock of Wolgan River and Carne Creek, as well as under cliffs and pagodas on Newnes Plateau causing "permanent loss of some valued environmental assets" and thus "reducing visual amenity for passive and active recreational user groups". Sheer madness that will bring campaigners for the environment out in unprecedented numbers. Centennial Coal have already reported that "Fracturing and buckling of the exposed bedrock occurred along Kangaroo Creek with widths typically ranging between 50 mm and 100 mm. Surface cracking on the valley sides of Kangaroo Creek had widths ranging between 10 mm and 110 mm. Localised cracking also occurred with widths up to approximately 200 mm." DPIE must require that the Wolgan River and the pristine Carne Creek, which flows through the Greater Blue Mountains World Heritage Area, and past the Wolgan Valley Resort, be protected from water losses and contamination from the proposed activities. Similarly, the spectacular Gardens of Stone, a World Heritage area featuring stunning rock pagodas, sandstone cliffs and canyons, is an international treasure that must be preserved for future generations, not trashed for short-

term profit. Centennial Coal say “The maximum predicted vertical subsidence for the APMEP is 2250 mm”, that’s over 2 metres! In addition to the conventional subsidence movements that have been predicted, “it is also likely that far-field horizontal movements will occur outside of the mining area. “The far-field horizontal movement at a distance of 1 km outside the mining area is predicted as 80 mm based on the 95 % confidence level.” This severity of surface disturbance will bring down pagodas, cause rockfalls (threatening Aboriginal cave sites in the process), and surely decimate ecosystems following the draining of swamps.

- The proposed mine extension would destroy the habitat of some ‘supposedly protected’ endangered flora and fauna. The Temperate Highland Peat Swamp on Sandstone (THPSS) is home to at least three nationally endangered flora species that have been recorded within the mining area and which would be subject to impacts from the planned subsidence: (Carex klaphakei (Klaphake's Sedge); Persoonia hindii; and Veronica blakelyi.) In the seven years since Centennial Coal’s consultants identified the need for targeted surveys of these nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company’s environmental assessment. Centennial identify at least another twelve threatened plant species likely to be affected, as well as reporting “There may be some die-back of fringing aquatic vegetation following flow diversions and drainage of pools”, and that “subsidence-induced rockfalls could damage some vegetation.”

- The fauna that depend on the plant communities under threat would also suffer degradation. These include the endangered Blue Mountains Water Skink (Eulamprus leuraensis) and the endangered Giant Dragonfly (Petalura gigantea). I quote their report again: “Aquifers that provide habitat for stygofauna are expected to be impacted by reductions in groundwater levels following mining induced groundwater depressurisation. Localised impacts to aquatic habitat and macroinvertebrates will occur following predicted mine subsidence and associated fracturing in streams and ephemeral drainage lines adjacent to and overlaying the proposed longwalls.” Their proposal to ‘offset’ upland swamps damaged by coal mining is a perversion of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

- No additional Aboriginal heritage or Historic heritage surveys have been undertaken within the amended Project Application Area since the preparation of the 2014 EIS. How does that sit with the regional Aboriginal Cultural Heritage Management Plan? I would like to hear clearly what the traditional custodians of this land feel about the proposed amendments, before any approvals are considered further.

- New South Wales governments have adopted the principles of Ecologically Sustainable Development (ESD) via the Protection of the Environment Administration Act 1991. ESD is an internationally recognised concept, which has been adopted by the Commonwealth and all States of Australia. The proposed amendment to APMEP clearly fails to meet the principles of this Act.

The Precautionary Principle has not been applied, since their plan depends on knowingly causing irrevocable damage to State significant natural habitat, even beyond the boundaries of their project area. Conservation of biological diversity and ecological integrity should be a fundamental consideration in environmental planning and decision-making processes. The Angus Place amendment proposal is clearly prepared to trash this principle wholeheartedly.

The only way that it could be economically viable is if we allowed them to flout this ESD principle entirely, instead of making every effort to save these natural wonders bequeathed to us across the ages. This proposal to enlarge and extend coal-mining at Angus Place colliery shows contempt for the principle of Inter-generational Equity at a time when the world is faced with a climate catastrophe of accelerating anthropogenic global warming. Our grandchildren's grandchildren should be able to enjoy the natural wonders of our environment. This proposal compromises the ability of future generations to meet their own needs. The present generation should ensure that the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations.

- Centennial Coal has sought to grandfather its consent until 2053, which is an ambit claim pushing out beyond the time when coal should be a feature of Australia's energy mix, beyond the life expectancy of Mount Piper Power Station, beyond when exports of thermal coal will be socially or politically acceptable. It would be a failed and stranded asset by that time, without the finances perhaps to fully remediate the site. Angus Place mine has been moth-balled since 2015 (care and maintenance) and their adjacent Springvale mine is already experiencing a crisis of low yield and quality, even before it is due to close in 2024. The eight years remaining on Springvale's consent should be long enough for a transition to a post-coal economy in the Lithgow area, provided that State and Federal Governments show leadership in providing opportunities (for the four hundred plus workers) to receive re-training into sustainable emerging industries. Social Equity demands that a plan be formulated urgently to help Lithgow move beyond the dinosaur of coal exploitation to a more diverse and resilient economy.

- I note that Centennial Angus Place say that the economic viability of this proposal, even in the short-term, depends on them being allowed to:

increase the long-wall void width to 360 m wide (causing gross subsidence and decimation of surface features); destroy up to 50 hectares of bush on the Newnes Plateau (which they don't own – we do); increase vehicle traffic on roads on the Newnes Plateau during construction causing impacts to recreational amenity due to traffic, noise, dust and temporary access restrictions for user groups; closure of their onsite wastewater treatment system in favour of connection to the Lithgow City Council main sewer line (really?!) Their desperate plan to extend the life of these mines is contingent on unreasonable exploitation or destruction of assets which don't belong to them. NSW Department of Planning, Industry and Environment is responsible for weighing up these conflicting interests. I trust that the interests of the whole of society, present and future, are being carefully considered.

- I request that if any amended consent is issued, then it must be reviewed every five years, with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired power generation as soon as possible, to help stop the growing climate catastrophe.

For all the above reasons, I request that the amended mine extension proposal be subject to an Independent Planning Commission review process.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Steve Garthwin

29 Hughes Avenue, Lawson NSW 2783

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River will be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over a kilometre from mining operations.

The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

The proposal to offset upland swamps damaged by coal mining is a perversion of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

Instead of considering extensions to mining in the state's heritage areas, the DoPIE should be actively planning for the staged shutdown of mining in these areas.

To recommend an increase in coal mining in any part of the state, let alone it's most precious heritage areas, is as ludicrous as it is visionless.

If this proposal is allowed to go ahead, Secretary Betts, Ministers Barilaro, Kean and Stokes, and Premier Berejiklian will forever be remembered for boosting climate change at the expense of the nation's heritage.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours faithfully,

M. Bowden

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

James Gualdi

P.S I worked in the mines for 5 years and I know the impact that a coal mine has on the environment. This is the main reason why solemnly object to the proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I am seriously concerned about the environmental damage that will be caused if the Angus Place mine extension receives consent. I request that the Department of Planning, Industry and Environment recommends refusal.

Thank you for the opportunity to comment on this project.

My reasons for opposition are:

- The consent will last until 2053. NSW has a climate policy aimed at zero emissions by 2050. The use of coal fired power generation should be on a reducing trajectory starting right now. In the meantime there are many other existing sources of thermal coal. Opening up such a damaging mine is unnecessary.

- The proposal does not adequately protect nationally endangered swamps because of the risk of fracturing sandstone structure. Centennial Coal must not be allowed to further replicate the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- There is a significant risk of damage to spectacular Birds Rock, Wolgan River, Carne Creek, pagodas, cliffs in the 2,000 hectare Study Area. Wolgan Falls must not run dry. The geological heritage can never by replaced.

- There is great tourism and employment potential in the Gardens of Stone area. The proposal called Destination Pagoda promotes visitor access and recreation activities and provides many employment opportunities. Don't let this potential be destroyed by a coal mine that will also lead to climate destroying carbon emissions.

- In the seven years since Centennial's consultants identified the need for targeted surveys of nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites within the proposal where these Federally listed plants occur, highlighting the weakness of the company's environmental assessment.

Due to the extent of mining impacts and duration of approval being sought, the amended Angus Place mine extension proposal must be subject to an Independent Planning Commission hearing, review and determination process.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

The covid 19 situation following on from a summer of devastation should be a time that our leaders reflect on what's important like many of us are doing at home. We were taught at school that as our environment is corrupted we would experience more fire, floods and disease. This is exactly the scenario that is playing out in front of our eyes and we as humans are responsible.

To wilfully choose to relax environmental regulation and allow further destructive practices in environmentally sensitive areas such as the Gardens of Stone tells me our leaders are acting in an incredibly opportunistic fashion. This looks like our leaders only think of their immediate political future and not the future of our country, world and for our kids. It looks exploitative of a public health situation, not in line with our democracy and short sighted in terms of health, economics and votes. This is a grab for short term monetary gain which will add to the climate disaster as well as destroy and amazing place.

I have not made any political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal. It is a disastrous one.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Margaret Rozea

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

Canberra Bushwalking Club members walk in and revere the Gardens of Stone and Wollemi National Parks as these Parks are of extraordinary natural significance, comprising rare landforms, rare vegetation communities and ancient aboriginal rock art. The proposal resulting in the desecration of these areas for the purpose of mining coal is globally impacting and unnecessarily environmentally destructive.

Please recommend rejection of this proposal.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Jarvis Mumford-Day

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

- The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

- The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

- The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Nicholas Wittenberg

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I OPPOSE the mine extension as it will fracture the sandstone strata supporting the five nationally endangered upland swamps: Destroying TriStar, Twin Gully, Birds Rock Flowers,Crocodile and Trail 6.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to Gardens of Stone area the spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longwall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort

not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

Proposed mine affects 10,551ha or about half of Newnes State Forest.This 2053 or 33 year ambit claim is unrealistic and unfair to Lithgow as it would sabotage Destination Pagoda Tourism Project. Do not allow cliff wall collapses or fracture of rock formations in the mining area.

Angus Place Mine proposes to send up to 30 megalitres of mine water a day that will drain from the Newnes Plateau into the new Springvale Water Treatment Plant for the Mt.Piper Power Station. This water management and the offset money can NEVER compensate for the loss of national and international heritage.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

Please consider the future of our planet and our children and refuse consent for Centennial Coal to extend their mine into an area which should be receiving protection for its wilderness value and ecological communities.

While I strenuously object to all new coal developments nevertheless there are many areas that could be developed with much less habitat destruction and significant impacts on a amazing and beautiful part of our natural heritage.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Ms Tukin

As a young person living in the Macquarie Electorate, I find it imperative that this proposal is rejected. As a significant portion of the National Parks has been destroyed due to the recent bushfires, we must preserve and protect the bushland that has yet to be damaged.

As well as this, relying on coal in a time when Australia must divest from fossil fuels is frankly irresponsible, if not dangerous.

This is why the proposal must be rejected.

Yours sincerely,

Helen McCarthy

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

I have walked extensively in this area and love the exceptional natural beauty of this area. I have also seen the damage caused by mining which is irreparable, the draining of swamps and extensive cracking of the pagodas. Once damaged it can't be rectified, and assurances have already been given about damage which could not be upheld.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Anne Milson

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

PLEASE do not allow our waterways to run dry!! This has already happened in Capertee Valley with flows to Coco Creek, Crown Creek and Red Rock Creek all compromised by long wall mining at Baal Bone Colliery. Aquifers were fractured and the springs that fed these creeks ran dry.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

PLEASE protect these rare swamps which are biodiversity wonderlands!

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of

metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

PLEASE DO NOT allow the Wolgan River to run dry!

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

PLEASE DO NOT allow our local creeks and rivers to become contaminated with heavy metals!

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

PLEASE help protect our rare and endangered flora!

PLEASE protect our natural environment for future generations!

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

To whom it may concern,

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent for this development for the many reasons outlined below. In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches.

+ The mine extension will fracture the sandstone strata supporting the nationally endangered swamps.Centennial Coal has already caused significant damage hto threatened upland swamps on the Newnes Plateau.

+ Centennial Coal must be required to revise its proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area. Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

+ The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

+ The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

+ DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface road

+ Centennial coal has sought to grandfather its consent until 2053. But it must be reviewed every 5 years with a possibility of cancellation from 2025. Coal will increasingly become economically unviable, so future NSW Governments must be given the opportunity to end coal-fired electric power as soon it does so

For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Mic Cavazzini

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

In light of the past year drought, catastrophic bushfires that we had to endure in the past years, it is extremely sad to see that we are still giving green light for coal mine extensions. We are leaving a sad future for our children and I will recommend that we do more to save what is left of our precious bush. I hope the government and mining companies are not using the fact that everyone is stuck at home to pass legislation that would impact our environment and profit a small amount of businesses.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I write to provide my objection to the abovementioned State Significant Project.

I strongly oppose the extension of this mine, in particular the resultant sandstone fractures.

I specifically object to the significant, permanent and unmitigated impact which will be caused to some of the very last remaining healthy Hanging Swamps. It is not possible to effectively offset the significant and permanent impact on Hanging Swamps, Giant Dragonfly and Leura Skink when there is no longer any water and no longer any swamps. This is already the state of the swamps undercut by previous longwall mines in the region - as anyone can go and attest for themselves.

The proposed granfathering of consent until 2053 is completely inappropriate.

I ask the DOPIE to recommend refusal of consent

If nothing else the public of NSW deserve this proposal to be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totaling $1,000 or more in the last two years.

Yours sincerely,

Peter Ridgeway

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

We have extraordinary heritage and ecological value in this region of NSW that enriches us as a society. We are reaching the limit of our natural environments' capacity to recover and thrive from the damage caused by the extraction industry. There are always moments when a different future can be opened up through the integrity of particular people

s choices. This is one of them.

Please recommend rejection of this proposal.

I have a deep engagement with the area as a bushwalker and rockclimber. Its a precious part of the world and it deserves to not have any further damage done to it.

I am also a researcher at Sydney University and I have done extensive field work in the area and so I feel very aware of how delicate the environment is out there.

Mining has certainly had a run but further extensions are not appropriate any longer.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I was raised in Wentworth. I am very connected to this place and I want its natural heritage to be maintained for my children and their children. In these times when oil and coal prices have crashed its astonishing that the Government is allowing such a proposal, with no guarantee of jobs or royalty returns.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely, Pen

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The Angus Place colliery should not be there. There needs to be immediate transition to green and renewable energy and technologies with absolutely no jobs lost in the area - Germany and other countries have already made this transition. We are in a climate emergency and experiencing continuing bushfire threats. Bushfires came within meters of coal mine infrastructure earlier this year and just when we think the bushfires were finally put out there is already now another bushfre started in NSW. Stop the ecocide and omnicide now.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Jhen Elman

To whom it may concern

I am writing to object to the extension proposed by Centennial coal at the Angus Place mine.

As well as asking you to take into consideration my points below, I also request that this proposal be subject to an Independent Planning Commission hearing, review and determination process.

I am familiar with the area under proposal, having spent many days bush walking in the pagoda country and having seen many cracks in these rock formations which are attributed to the mining and I am concerned at the impact this is having on the stability of this spectacular area.

I am also opposed because of the contribution of coal to carbon emissions and the need for Australia to be focussing on renewable forms of energy rather than further increasing our impact on global climate change through coal mining.

I am aware of course of the economic contributions made by coal mining, but I suggest that the Gardens of Stone instead should be promoted for its eco-tourism and wilderness experiences values and with some sensitive and appropriate infrastructure development it could certainly become a national and international tourism destination.

As well as the points made in brief above, I would like to add the following points:

Impact on waterways - Endangered swamps and Carne creek would be further damaged by the extension to the coal mine. Evidence of the type of damage incurred can be seen in the immense damage to up to 50% of swamps on the Newnes Plateau. Furthermore this mine extension could drain the Wolgan river impacting on the viability of Wolgan falls.

Clearing of public forest - 50 hectares of forest is proposed to be cleared for infrastructure - this is excessive by any means.

Fracturing of pagodas and rock strata - As well as damage caused to many pagoda formations, there is also a strong risk of damage to the significant Birds Rock

Outstanding ecological value - this is an area of immense ecological value. At a time when so much of the natural world is at peril, it behooves the NSW government to protect those areas that meet world heritage status such as the Gardens of Stone.

I implore you to take note of the expert submissions and public submissions that oppose the extension to this mine. Please make a decision in favour of protection, and at the very least an IPC review process.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Yours sincerely,

Clare Power

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

27 April 2020

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (DoPIE) recommend refusal of consent for this application.

I do not support the application because of its potential damage to the Gardens of Stone area of national heritage significance, including spectacular Birds Rock, pagodas, cliffs, swamps, streams and the Wolgan River and Falls, in the 2000 hectare proposed mining area.

Threats to significant swamps

It would appear that Centennial Coal has not modified the Angus Place mine extension proposal thus failing to adequately protect swamps which are of national heritage importance. DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

Encroachment on public land

I am concerned about the proposed excessive clearing of 50 hectares of public forest for roads, ventilation and pumping facilities. These must be greatly reduced and all facilities located away from environmentally sensitive areas.

Inadequate environmental assessment

I understand that in the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company has failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

Misuse of Offset policy

In addition, I believe it would be totally unacceptable that any proposal to offset any part of this irreplaceable national heritage would be approved. The offsets go against the idea of a national heritage list which protects the best and most treasured items in Australia.

Climate emergency

Equally concerning is that Centennial has sought to grandfather its consent until 2053. Future adaption of the energy sector will be necessary in order to address the growing climate emergency. Future NSW Governments will aim to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe. This is in line with community expectations. Centennial Coal's plan cannot be supported.

For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Mrs Christine Wells

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Being an avid user of this area for recreational activities I believe that it should remain untouched by further mining activities.

Yours sincerely,

Phil Reid

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

If this summer just gone has taught us anything it is that we desperately need to listen to the climate scientist, do what we can as soon as we can to avoid further catastrophic consequences of the climate and environmental crisis. Persisting with fossil fuelled electricity worsen the crisis. We all know this though some may chose to ignore it in pursuit of short term gain. Please, consider the future, take a strategic, long term view and reject this proposal to destroy this wilderness to dig us more coal. You know the plan is wrong and so do your kids! What would they tell you to do?

I have not made political donations or gifts totalling $1,000 or more in the last two years.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

This is an area of significant natural heritage. Please don't allow it to be destroyed.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Further, the proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

Having spent many years bush walking in the beautiful and unique Gardens of Stone NP, I am very concerned that this area is under further threat from this expansion proposal.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Meike Edwards (27/4/2020)

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

The Gardens of Stone and surrounding areas are a major tourism drawcard for Regional Tourism Travel for NSW - Regional Tourism is a major driver of revenue and is a NSW Tourism State Initiative. Water supply must not be disrupted to areas critical for animals and humans. NSW regional residents often rely on river water as we have no access to town supplied water. We purchased our properties with water supply and then this water supply is often taken by mining companies without compensation or replaced water supply. This is of course, not acceptable.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I strongly oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency.

Upon discovering this proposal it made me actually weep and feel very depressed and distressed, as this whole Gardens of Stone region is an absolutely spectacular and hugely important and special natural wonder that MUST be preserved. When myself and friends went hiking to explore the area through to "Cathedral Cave", we were awestruck and it took our breath away. The vast expanses of diverse and beautiful vegetation, magnificent rock formations, waterways, swamps and waterfalls are SO important to conserve. It will be a devastating loss to irreversibly destroy these under the mining proposal.

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

The supplementary assessment for this mine proposal omits consideration of far-field mining impacts on the Wolgan River and its swamps. The Wolgan Lineament Field is located west and adjacent to the mine area, and this field will be reactivated during mining. When the Wolgan Lineament Field is reactivated, the Wolgan River shall be drained, just as the other streams on Newnes Plateau affected by far field groundwater impacts have. These impacts have been found to extend over one kilometre from mining operations.

The revised proposal must not be permitted to increase surface subsidence arising from mining to 2.25 metres under this design, up from 1.90 metres in the 2014 mine layout.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Dr. Christie Foster

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Cathryn Lak.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- under international agreements, including the Paris Agreement, Australia is committed to keeping climate change to less than 2C above preindustrial. With existing worldwide proven fossil fuel reserves already expected to exceed this, any new development is directly against this agreement.

- national and international banks and insurers are rapidly moving away from fossil fuels, as they are an unacceptable risk (e.g. Allianz, AXA XL, Chubb, Munich Re, Swiss Re and many others. The project should not be considered under public finance, and it's unlikely to get private finance; after all, it's not rocket science to know that coal power has no viable future financially, let alone should we wish to keep a habitable planet.

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years. The future environmental Greater Blue Mountain world heritage area, remains in our hands. We have already seen what has happened with the bush fires this past summer. I also believe WE must act now for the future, too much damage has been done. Making a little bit of money NOW, does not equate to a safe future. Please review the company's environmental assessment and stop the contamination of water.

Please recommend rejection of this proposal.

Yours sincerely,

C.Moore Hardy RN

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I implore you to extend investment and infrastructure in renewables.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Melissa Davies

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Andrew Kaypher

Done. These were my personal comments added to the bottom:

The covid 19 situation should be a time that our leaders reflect on what's important like many of us are doing at home. There have been warnings, I can remember first learning of these when I was around eight years old. I am now forty years old. We were taught that as our environment is corrupted we would experience more fire, floods and disease. This is exactly the scenario that is playing out in front of our eyes. To wilfully chose to relax environmental regulation and allow further destructive practices in environmentally sensitive areas such as the Gardens of Stone tells me our leaders are acting in an incredibly opportunistic fashion. This feels exploitative of a public health situation, not in line with our democracy and short sighted in terms of health, economics and votes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

We need to stop destroying natural assets like the Garden of Stones, these places have much more value to give in terms of tourism and recreation than a coal mine that will tear it up, make a few bucks and then be a blight on the land for a very long time. These amazing parts of Australia could be invested in to create wealth for local communities indefinitely through tourism and provide a very much needed reason for people to get out into nature.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

To the Department of Planning, Industry and Environment,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

In this trying time, in which we as Australians are trying to work through the trials COVID-19 has presented us and recover from the devastating bushfires brought about by the climate emergency, I believe we need to protect our natural resources and work towards a sustainable future.

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Thank you for your work

I look forward to hearing back from you

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency..

Many companies are moving away from thermal coal: they refuse to finance, invest in, or insure thermal coal.

Such companies include BHP, Rio Tinto, BlackRock (world's largest fund manager), Suncorp, CBA, QBE, Axis, NAB,

Goldman Sachs, BNP Paribas.

Thermal coal price is dropping. The uncertainty of the global economic outlook makes this proposal risky. Will the Australian taxpayer be left with a mess to clean up should this proposal go ahead?

As far as creating jobs, it would seem from the document that not many jobs will be created but re-purposed. In any cases, how many new jobs will be created should this proposal go ahead? 50? 100?

There is evidence of the association of coal mining with a wide ranging array of diseases (see epidemiological studies). Centennial owned by Banpu (Thailand) and SK (Korea)will not have to deal with those costs but Australian taxpayers will.

Re its environmental responsibility, Centennial Coal has an appalling track record.

the Clarence colliery has polluted the Wollangambe river by pumping waste into it. In 2015, a wall collapsed dumping coal in Wollangambe. It still is polluted with heavy metals.

Mine effluent is also dumped into a tributary of the Coxs river which feeds the Sydney drinking water catchment.

Why is the government of NSW trusting a polluting company with its water supply?

As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent due to concerns for local and the wider environment. We are on the trajectory of 4 degree Celsius warming and allowing centennial coal to mine until 2053 is irresponsible to humankind, not to mention the local impacts the resultant destruction of upland swamps will have on bushfire resilience, water source, and ecological communities at and downstream of the existing geological features.

Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

If a natural watercourse has to be drained, diverted or interfered with in any way then clearly it's totally unsuitable!

Yours sincerely,

Elizabeth Bain

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I would like to ask the Department of Planning, Industry and environment to refuse consent to the Angus Place Mine Extension. I have grave concerns that the proposal is not protecting water resources and therefore surrounding swamps, which are home to a host of fauna and flora, as well as being recognized as essential. Furthermore, in light of Climate Change, it seems highly inappropriate to allow a mining approval until the year 2053, a time when the planet will not be able to rely on fossil fuels for it's energy supplies any more.

I strongly urge the Department to consider the common wellbeing of all people in Australia in relation to the potential of about 400 workers losing their jobs in case the mine is rejected approval. A scheme of retraining of workers in the fields of tourism, rehabilitation of existing mine, specialized farming (regenerative farming) could help prevent a drop in socio economic well being of these workers. A refusal of the Angus Place Mine Extension would result in maintaining the sandstone strata supporting the swamps and therefore conserve this important biosphere for enjoyment of future generations, as well as prevent the loss of endangered species. We would furthermore be able to enjoy the spectacular Birds Rock, pagodas and cliffs in this 2000 hectare affected area. If this mine goes ahead, we will see a similar damage to these swamps as already happend at the upland swamps on the Newnes Plateau. Any assurance by the mining operator that this will not happen should be looked at with concern. Negligent management of mining should not be allowed to be repeated.

The risks to the Wolgan Falls seems to also be under considered. These falls should not run dry and if the mine was to receive the go ahead (which it really should not), the longwall mining panels along the wolgan River side should be shortened by hundreds of metres to prevent river water losses.

Should the Department allow for mining to proceed against common and scientific sense, I would request from the department to:

- review the consent every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

In conclusion for all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

The human species stands at a watershed moment in History. We have the choice to embrace a future which will be able to provide specially Australia with a great potential to become a superpower, based on the analysis of the economist Ross Garnaut or continue down the path of complete destruction of this planet and all it's species. It seems absolutely insane to even be considering this project, but it is understood, that old alliances and power sharing forces work hard against loosing their hold on power and the resulting profits. It would be good to embrace a 21st century economy. Innovation is the future, not more of the same destruction. I urge the Department in the name of most Australians, to not allow this project to go ahead.

I further would like to state, that i have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Dorothee Babeck

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Over the past 10 years I have bushwalked frequently in this area.Not far from the existing Angus Place mine are dried up swamps which illustrate the damage that operations like those proposed have previously caused. Pagodas and cliff edges in that area are cracked. In the area under which mining is to take place there are swamps that will be similarly affected. The valley that the mining skirts perilously close to in the North of the area to be mined is a spectacular valley with rock features that include slots and stupendous caves.My grandchildren are not old enough to walk in this area yet but I hope that this area can be preserved undamagedm for their future.

It is the future too that raises my ire in relation to the possibility of extending the timeline for mining until 2053. Last summer saw massive bushfires in this area. With the economic downturn and revaluation taking place because of the current global pandemic, great caution needs to be demonstrated in providing a carte blanche for coal mining so far into the future. Climate change is real and needs to be combatted by not approving projects like this.

Please recommend rejection of this proposal.

Yours sincerely,

John Park

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.
- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Thomas Ryan

- The excessive clearing of 50 hectares of public forest for additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- The proposal to offset upland swamps damaged by coal mining is a perversion of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia.

For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Australia has an amazing opportunity to embrace renewable energy particularly solar energy. If European countries are embracing solar power on a large scale successfully then I cannot understand why Australia which is much sunnier than Germany (for example) which has approximately 15 times more solar photovoltaic (PV) power; is still stuck in the energy mindset of the 19th & 20th century. I am very disappointed that Coal seems to still be on the energy agenda in 2020.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Elizabeth Grcae and Vic Val

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. I value the recreational asset of this area, having bushwalked it and and admired its grandeur. To think that mining would destroy such valuable ecosystems and natural bush is sickening, especially in this time when coal mining is needing large subsidies from our public purse to attempt to make a profit by extracting filthy fossil fuels. The world is moving ahead, Fossil Fuel sales are on life support.

Centennial Coal has already caused significant damage to the Newnes Plateau, please stop more carnage to this 2000 Hectare area.

Thanks,

Janet Thompson

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

The proposal to offset upland swamps damaged by coal mining is a 'perversion' of the protection that should be given to this irreplaceable national heritage. Conscience money does not compensate for the loss of our nation's heritage. The offsets go against the idea of a national heritage list protecting the best and most treasured items in Australia. Where is there an equivalent landscape ? and what are the guarantees that that any offset area won't just be the subject of the next request to mine, undermine or otherwise degrade our natural heritage.

The Wollemi and Gardens of Stone were devastated in the 2020 summer fire season. This area should be left to heal.

I have not made political donations or gifts totaling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

I have lived in the region for over thirty years and visit Newnes a number of times a year. It is a magnificent region boasting some of the most breath taking vistas, extraordinary geological formations, habitat and Aboriginal art and cultural sites. I have watched the cracking across the plateau, the collapse of the important swamps on the Plateau (at the headwaters of the Sydney catchment) and seen the extent of cliff collapse since long wall mining was permitted. I have spoken against the continuation and expansion of coal mining in the area at previous PAC hearings both on the grounds of destruction of the local environment, water catchments and in particular the climate impacts of the continuation and expansion of coal mining.

I urge you to recognise the critical impacts this application will have in increased greenhouse gas emissions and the role ongoing coal mining plays in heating and drying our region and to reject the application.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- There should be a requirement to address the NSW State Government commitment to achieving net zero carbon emissions by 2030, and of Scope 3 emissions in the EIS. Because of the worldwide Climate Emergency and the need to drastically reduce GHG in the atmosphere, Scope 3 emissions from the extraction of fossil fuels should be assessed as well as Scope 1 and 2. We are being told by the IPCC, with which we have an agreement (the Paris Accord), that the next 10 years are crucial in addressing this emergency and that all countries must limit their emissions more and sooner to have a chance of restricting global heating to 1.5^{o}C above pre-industrial times. Modelling shows that global action to date has not managed to level our emissions significantly, so that the world is currently on a path to an alarming 3-4^{o} warming. All nations will need to urgently take more effective measures to lower GHG emissions to avoid this happening. Australia will be required to revise our targets before COP26, which has been postponed to early 2021. Where the fossil fuels are burnt is irrelevant: the public and environment at large suffer the effects, e.g. low-lying islands, including some in the Torres Strait, are becoming inhabitable due to rising sea levels and storm surges. The EPBC Act, if amended in this way, could be fundamental in addressing this emergency. If we leave it until the next review in 10 years' time, it would be too late.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Please protect our precious waterways, wetlands and the magnificent Gardens of Stone National Park, Newnes Plateau, Wolgan Falls and refuse consent of proposed Angus Place mine extension.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaptation of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

This environmentally sensitive and important area has already been under huge environmental stress from drought, unprecedented bushfires and recent heavy rains. DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau. DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Dr Rosalie Goldsmith

Dear Sir/Madam,

Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the Department of Planning, Industry and Environment (the DoPIE) recommend refusal of consent, as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps and has sought to grandfather its consent until 2053, preventing future necessary adaption of the energy sector to address the growing climate emergency. As a result:

- I oppose the mine extension as it will fracture the sandstone strata supporting the nationally endangered swamps.

- I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

As an attachment to this submission please see the short film produced by me on the subject of the Gardens of Stone area and conservation. This film was widely shown at film festivals internationally and demonstrated interest in this landscape around the globe. Link below.

- Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

- DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.

- Mini-longwall mining methods should be applied instead of the intensive longwall mining proposed to protect this significant part of the Gardens of Stone reserve proposal.

- The excessive clearing of 50 hectares of public forest for an additional roads, ventilation and pumping facilities must be greatly reduced and all facilities located away from sensitive areas.

- The Wolgan Falls must not run dry and so the proposed longall mining panels along the Wolgan River side of the proposed mining area must be shortened by hundreds of metres to prevent river water losses due to far field impacts associated with the extensive Wolgan Lineament Field.

- DoPIE must require that Pristine Carne Creek, and its waters that flow through the Greater Blue Mountains World Heritage Area and past the Wolgan Valley resort not be contaminated with iron and manganese or suffer reduced flows due to fracturing of surface rocks.

- In the seven years since Centennial's consultants identified the need for targeted surveys of four nationally endangered plants, the company failed to undertake these searches. Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- There should be a requirement to address the NSW State Government commitment to achieving net zero carbon emissions by 2030, and of Scope 3 emissions in the EIS. Because of the worldwide Climate Emergency and the need to drastically reduce GHG in the atmosphere, Scope 3 emissions from the extraction of fossil fuels should be assessed as well as Scope 1 and 2. We are being told by the IPCC, with which we have an agreement (the Paris Accord), that the next 10 years are crucial in addressing this emergency and that all countries must limit their emissions more and sooner to have a chance of restricting global heating to 1.5^{o}C above pre-industrial times. Modelling shows that global action to date has not managed to level our emissions significantly, so that the world is currently on a path to an alarming 3-4^{o} warming. All nations will need to urgently take more effective measures to lower GHG emissions to avoid this happening. Australia will be required to revise our targets before COP26, which has been postponed to early 2021. Where the fossil fuels are burnt is irrelevant: the public and environment at large suffer the effects, e.g. low-lying islands, including some in the Torres Strait, are becoming inhabitable due to rising sea levels and storm surges. The EPBC Act, if amended in this way, could be fundamental in addressing this emergency. If we leave it until the next review in 10 years' time, it would be too late.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

Please recommend refusal of the Angus Place Mine Extension and protect Newnes Plateau, Gardens of Stone National Park, Wolgan Falls and our irreplaceable waterways and wetlands.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Lithgow Environment Group has in that time identified many sites where these Federally listed plants occur within the proposal, highlighting the weakness of the company's environmental assessment.

- For all the above reasons, the amended mine extension proposal must be subject to Independent Planning Commission review processes.

It is hard to reconcile that in 2020 with the memory of horrific and devastating bushfires, droughts lasting many years, farmers selling stock due to lack of rain, no pastures due to extreme temperatures and parched earth, that Centennial Coal is proposing the Angus Place Mine Extension. The media has shown on many occasions the drained creek beds, dried up swamps, collapsed mine walls with long wall mining-etc.etc. the list goes on. It is also difficult to understand and justify the megalitres of water needed in the coal mining industry when water is so precious to the environment and for human consumption. We hear that in some cases, the cost of this life-saving resource to the mining industry, is free. This precious gift seems to be cost free to some but requires payment from all Australians. The NSW State Government should follow the "The Precautionary Principle" which is First do no Harm. So many times there are "unforeseen circumstances and problems" requiring extra expenditure or alterations of plans so that environmental undertakings are abandoned.

I have not made political donations or gifts totalling $1,000 or more in the last two years.

Please recommend rejection of this proposal.

Yours sincerely,

Susan Kilminster

Mining Projects

NSW Department of Planning, Industry and Environment

Locked Bag 5022

Parramatta NSW 2124

Dear Sir/Madam,

My Objection to the State Significant Project – Angus Place Mine Extension (SSD 5602 - Amendment Exhibition)

I request that the DoPIE refuse to grant the requested extension as Centennial Coal has not modified the Angus Place mine extension proposal to adequately protect nationally endangered swamps. This extension will further pollute our climate and threaten the critically endangered local environment until 2053! If approved this extension would contribute to NSW's greenhouse gas emissions by supplying more coal to the nearby Mt Piper Power Station which should be retired earlier not later to protect our climate for future generations.

The mine extension will fracture the sandstone strata supporting 5 endangered swamps in the proposed Gardens of Stone conservation reserve, advocated for by local and national conservation groups, draining them of water and life and destroying the natural environment of this amazing and unique area which should be protected.

I request that if any consent is issued, then it must be reviewed every 5 years with a possibility of cancellation from 2025, to enable future NSW Governments to end coal-fired electric power as soon as possible and so help stop the growing climate catastrophe.

Please require Centennial Coal to revise this amended proposal to prevent damage to spectacular Birds Rock, pagodas, cliffs and the nationally endangered swamps in the 2,000 hectare proposed mining area.

DoPIE must not allow Centennial Coal to replicate under this proposal the damage it has already caused to nationally threatened upland swamps on the Newnes Plateau.
