**University of Sydney Campus Improvement Program 2014-2020 State
Significant Development (SSD 6123)**

Dear Mr McManus

We are writing to you in total rejection of the University of Sydney's plan to bulldoze Darlington's Eucalypt Grove and build a monster building.

This is the only area that remains that gives us a little privacy from the university.

To have this wonderful area so full of wildlife, especially native birds disappear for the sake of more ugly university brick is not right!

For 22 years we have lived across the road from the uni had to deal with all of the problems of noise and interruption from students – the only respite is that small but lovely grassed area with the Eucalypt Grove in front on Shepherd St.

The University has many other areas to consider – please do not let the university take away more of our privacy as residents.

This development will overlook our dwelling and spoil our lovely area.

We as residents love our trees and wildlife we still have that have not succumbed to the university taking more and will not let them succumb.

These animals frequent the Eucalypt Grove – Kookaburras, Lorikeets, Corella, butcher birds, Native minors, Sparrows, passing Crows, Currawongs and possums.

This is our last remaining little haven on the whole western side of Shepherd Street from Cleveland Street to Abercrombie Street – the only green section left. It's the only vista left to break up the university's ugly concrete and mortar jungle

Please tell the university to leave our last little haven ALONE.

Yours Sincerely

MICHAEL IVERACH 52 CALDER RD DARLINGTON
2020.
