RE: WINDSOR BRIDGE.

Dear Sir,

I write this note to SUPPORT the Windsor Bridge proposal as it is about time something was done to assist the traffic flows across the river.

There are thousands of residents on the western side who have to plan their work, timetable, and visits to any part of the east regions around the slow moving and unsafe traffic movements across the current bridge. In fact today at about noon a truck collided on the bridge and stopped traffic both ways for quite some time.

In respect of the current proposal I wish to raise the following issues:-

- a.) Noise screens on western side.
- b.) Height of bridge over water level
- c.) Visitor parking and turning circle provisions

- d.) Potential for widening bridge.
- e.) Staging of future strip for pedestrians/cyclists.
- f.) Retention of part of the old bridge.
- g.) Economic benefits to local & through traffic.

Due to personal reasons I am unable to give you the more detailed information on each section outlined above as at today's date. As your instructions say "comments are requested by 17/12" I will complete my submission in more detail and forward it to you as soon as I can.

Respectfully,

* As per your advice
