My name is Tony Redman. I live at 1439 Towrang Rd. I've lived in this beautiful area for 29 years.

When I first heard the Gunlake crushing plant, I assumed that someone was using a big dozer or other road working machinery around 500 metres from my home.

The thought of having this noise going 24 hours a day would make my life miserable. I can't understand why they don't build a shed to cover the plant. That's what Holcim did and it's been very successful.

The other objection I have is the proposed increase in traffic and the damage to the road. Last week, I was lucky to avoid an accident due to the road damage on the Bypass Road.

Their plan to put over 600 truck trips on the roads will cause more damage to the road and is likely to cause accidents. I can't believe that our government can think this is a good option. Surely its possible to use the rail system?

All my neighbours are very upset and I respectfully ask you to do whatever is possible to mandate a rail solution to the transport and to solve the noise problem by having Gunlake cover the crusher with a shed.

Tony Redman
