

I am writing to object to this Application put forth by Enviro Recycling at Revesby, due to the factors listed below:

- 1) The current rate and amount of POLLUTION is already at an alarming high.
- 2) The DUST that is CURRENTLY produced from this facility is outrageous as a direct result this pollution currently and affects the eyes and breathing passages on a daily basis.
- 3) The CURRENT NOISE that is polluted from this facility is shockingly daunting and spontaneous in its nature. As a direct result of such noise pollution the ground shakes when the bangs are occurring (machinery belting the ground) and therefore shaking the surrounding buildings and causing an almighty BANG that makes you jump with shock and awe. This continuous and relentless noise pollution that erupts from this facility is above any regulatory range of acceptability. THE NOISE IS EITHER DEAFENING OR A CONTINUOUS ANNOYING DRONING HUM.
- 4) The excessive Pollution on the vehicles in the area due to the current amount of DUST is excessive to say the least. Upon returning to your vehicle after a day you have to wash the car windscreen down so as you can see, and you cannot use the windscreen wipers as the debris gets stuck in the wiper blades and smears the substance further. I have personally taken photos of this pollution which I personally witnessed to fall from the sky over the fence of ENVIRO like SNOW onto my vehicle that was parked in the neighbouring property for NO MORE than 1 hour at the most.
- 5) The current rate of traffic that gathers along Violet street due to the trucks delivering the rubbish TO THIS FACILITY is at an all time high. The roads are filthy due to the pollution this facility outputs and is ultimately responsible for. The continuous inconvenience of the trucks queuing in the street is intolerable on most days. As proves to be a traffic hazard, causing peak hour grid lock for the duration this facility is operational.
