Application number (SSI-5414);

North West Rail Link, Environmental Impact Statement 2 (EIS 2)
Submissions to EIS 2. Traffic arrangements at Cherrybrook Station Precinct.

Thank you for providing me with a copy of the North West Rail Link (NWRL) Environmental Impact Statement part 2 covering the operation phase of the rail link and also for providing an excellent information centre at Castle Hill including several community information briefing sessions during November 2012.

Initial impressions.

This project is more than two decades late, and so I congratulate these planners for getting on with the job. In principle I support this project and I would like to see this project completed without further undue delay. However I wish to contribute to the planning of traffic arrangements around Cherrybrook station.

Information from Community Briefing Sessions.

At the community information briefings, in addition to the large format EIS2 booklet, NWRL staff offered planning information regarding the operation of Cherrybrook station. In particular,

- A. NWRL operation. NWRL staff confirmed the rail service will be operated by a private operator with the fare structure to be identical to that for the CityRail services. The current disastrous operation of the Mascot rail service will not be repeated in the NWRL. Rolling stock for the NWRL will be funded by the NSW government. The private operator will contribute to the cost of station construction and fit-out and may need some inducement to commit capital of this nature. Hence the amount of vacant land at each NWRL station site, marked on the EIS2 maps as 'Future Use to be Determined by Master Plan' could be seen as a 'carrot' for such investors. Perhaps the NSW government intends this land be permitted for high rise (up to 12 stories) development but is unwilling to say so publically at this stage. At Cherrybrook station precinct such high rise would be unsuitable, unacceptable to local residents and completely out of character for the locality.
- B. Traffic signals. After the construction phase, traffic signals will remain at the intersections of Castle Hill Road with Robert Road and Castle Hill Road with Glenhope Road. Therefore, along Castle Hill Road, there will be 4 sets of traffic signals in a distance of 1.2km (at the intersections with County Drive, Robert Road, Glenhope Road, and Edward Bennett Drive) that will cause additional delays and increased frustration for motorists with the potential to create road rage.
- C. Vehicle entrance to station precinct. EIS 2 and NWRL staff indicated that planners intend to create vehicle entrances to the station precinct from Robert Road, Franklin Road and from Castle Hill Road. EIS2 on page 22 and again in section 9.5.2 describes the Cherrybrook Station precinct and states the 'The new design incorporates a realignment of Robert Road and the new station access road to give priority to station access from Castle Hill Road and to reduce the potential for "rat-running" on residential streets'.
- D. Robert Road a bus feeder route. EIS2 and NWRL staff indicate that planners still intend to use Robert Road as a feeder road for buses to enter the station precinct from the north and that buses would exit the station precinct via Franklin Road and onto Neale Street. EIS2 (section 8.1.5 Figure 17) indicates that approximately 16 buses per hour for each morning and evening peak period is expected to use Robert Road for station access.

Issues of Concern – this submission.

- A. Traffic signals. The number of pedestrian commuters walking to Cherrybrook station from the south side of Castle Hill Road who would benefit from permanent traffic signals at a Glenhope Road pedestrian crossing is expected to be very small. But every motorist using Castle Hill Road could expect delays at these traffic signals. Replacing the Glenhope Road traffic signals with a pedestrian underpass or overpass into the station precinct would allow every pedestrian to safely cross Castle Hill Road at any time with no delay at all for the motorist.

- B. Cherrybrook station patronage. Figures for the expected patronage at Cherrybrook station are unavailable and so estimates will have to suffice.
- Average CityRail patronage. The number of CityRail passenger journeys in 2010-11 was 294.5 million servicing 307 CityRail stations (RailCorp Annual Report 2010-11, p22). Assuming most passenger trips occur on week days and are evenly spread across all stations, then the average number of passengers per day per station is 3690 (ie approximately 1845 station entrants and 1845 station exits). Cherrybrook station could expect at least this number of commuters daily.
 - CityRail barrier counts. The most recent barrier counts for CityRail stations are from June 2010 and are shown in the attached at the end of this submission. Pennant Hills and Beecroft stations, being adjacent to the proposed Cherrybrook station, probably give the best estimate for Cherrybrook station patronage. From the CityRail barrier counts table, Pennant Hills station serviced 6500 passengers daily (3250 entries and 3250 exits) whilst Beecroft station serviced 4100 passengers daily (2050 entries and 2050 exits).
 - North West Rail patronage forecast. A number of patronage forecast estimates for the whole of the North West Rail line were made for the Department of Planning (Environmental Impact Assessment Part B, Chapter 5, p5.9, 2008) that estimate the total number of passenger trips to be in the range of 15 to 24 million per year. Again, assuming most passenger trips occur on week days and are evenly spread across all 8 NWRL stations, then the expected number of commuters for Cherrybrook station could be in the range of 7200 to 11500 passengers per day.
- C. Traffic density at Cherrybrook station. With only 400 car parking spaces at Cherrybrook station (catering for approx. 400 commuters) plus a few pedestrian commuters but a patronage estimate of 2000 to 4000 passengers each morning and evening, then many commuters will have to arrive by bus (approximately 45 to 90 bus loads) or park their cars in the streets adjoining the station. This bus capacity is significantly in excess of the EIS2 estimate of 16 buses per hour for the morning peak period.
- D. Robert Road a bus feeder route. On a street directory, Robert Road appears to be an attractive possible entry point for buses entering the station precinct, but local knowledge shows this to be a very unsound proposal.
- Currently no buses use Robert Road since the road is only 7metres wide and contains a traffic chicane near Robert Park that prevents vehicles from passing at this point. EIS2 proposes to widen Robert Road only for the short distance between the station and Castle Hill Road. The remainder of Robert Road northwards from the station will remain as a narrow 7 metre wide road.
 - There are 265 residential blocks along Robert Road and its adjoining side streets that must use Robert Road as their access street. For comparison, the wider Franklin Road services only 90 residential blocks.
 - Traffic density along Robert Road has already reached the point where, in 1999, traffic authorities installed 'left-lane-in / left-lane-out' road control at the Castle Hill Road/Robert Road intersection in order to limit traffic flow down Robert Road and to improve safety at this intersection.
 - Robert Park is well located at the quiet intersection of Dalkeith Road and Robert Road. This park is unfenced and contains a fenced child's playground. An increase in commuter traffic along Robert Road will jeopardise the safety and tranquillity of this well used park space.
 - Branching off Robert Road are several medium density housing developments (Arundel Way, Louise Way, and Oliver Way) that all have limited car parking space. Overflow and visitor parking from these 'Way' developments must all use Robert Road – presently a quite and safe road for parking.
 - Garbage collection. Garbage collection in this locality occurs early on Tuesday mornings. Garbage collection along Castle Hill Road is always complete by 6am on Tuesday mornings in order to have minimal impact upon the morning commuter traffic along this arterial road. Garbage collection along Robert Road occurs any time up to midday on Tuesdays. With normal legal street car parking along Robert Road and a slowly crawling garbage truck there will be no room in this narrow street for 16 commuter buses per hour to pass a garbage truck.
 - Robert Road is currently suitable for light traffic only – the road surface is already cracking from the weight of garbage trucks and similar sized vehicles. Robert Road would need to be widened

and upgraded in order to accommodate a frequent commuter bus service – an unnecessary expense since suitable bus routes already exist. EIS2 does not plan to upgrade Robert Road north of the station and indicates that buses will have to make do with Robert Road in its existing condition except for reduced parking.

- Properties along Robert Road and adjoining streets would experience property devaluation and increased traffic noise if a commuter bus service was to frequently pass along Robert Road.
- Bus drivers no doubt prefer the safety of wide arterial roads to the stress of weaving a twisting rat-run through minor narrow back streets with the high risk of side swiping parked vehicles or the possible obstruction by oncoming vehicles.
- EIS2 indicates that the preferred traffic management strategy is to discourage ‘rat-running on residential streets’. Diverting **ALL** Cherrybrook station buses along Robert Road is inconsistent with this policy strategy.

E. Bus friendly roads already exist. Bus routes currently use the adjoining streets of County Drive, John Road, Franklin Road, Neale Avenue, Edward Bennet Drive and Castle Hill Road, all of which are 10 metres wide or more.

- County Drive was constructed to be a four lane arterial link road between New Line Road and the M2 at Carlingford. The M2 entrance at Carlingford was never built. County Drive, at the Castle Hill Road intersection, is six lanes wide (2 lanes north and 4 lanes south with a dedicated left turn lane to head eastwards along Castle Hill Road to Cherrybrook station). County Drive, for much of its length, is artificially choked down to a single lane in each direction (as a speed control measure) following a very poor decision by Hornsby Shire Council and was against the protests of a majority local residents. County Drive and Castle Hill Road have been built to accommodate heavy vehicles.
- County Drive could easily and cheaply be re-lined to dual lanes in each direction to improve its traffic capacity with other measures being employed for speed control. Buses to Cherrybrook station could then proceed along County Drive, make use of the dedicated left turn lane into Castle Hill Road and proceed to the station precinct with an ingress lane off Castle Hill Road into the station precinct. This would provide the safety of wide arterial roads without the dangers of weaving around narrow back streets.
- The junction of County Drive and John Road already poses a problem for large buses now as there is no set-back and buses have to occupy both lanes of County Drive when approaching the corner southbound so as to keep enough room on their left to negotiate the corner without colliding with either westbound traffic in John Road or the power pole on the corner. More buses making this turn exacerbates the problem. A neighbour was actually involved in a collision at this corner as a consequence of a bus making a wide turn. The same problem exists at the even tighter intersection of John Road and Robert Road. Buses turning right from John Road into Robert Road will consume the entire intersection leaving no space for other vehicles.
- EIS2 indicates that traffic authorities consider that County Drive has reached saturation capacity based upon the current configuration of the County Drive/Castle Hill Road intersection and vehicle counts from November 2011. The Level of Service at this intersection is classified as E (vehicle delays of 57 to 70 secs) with a Degree of Saturation being greater than 1.00. Whilst the data is no doubt accurate, the cause of delays at this intersection and possible remedies has been ignored. These measurements were made whilst County Drive was artificially choked down to a single lane in each direction. Most of the traffic travelling south along County Drive towards Castle Hill Road queues excessively to use the two right turn lanes westwards into Castle Hill Road. Traffic cannot reach the through lane to Hights Road or the left turn lane eastwards into Castle Hill Road because County Drive is single laned despite the roadway being wide enough for dual lanes. If County Drive was relined to be two lanes southwards from John Road to Castle Hill Road with no parking, then buses bound for Cherrybrook station would not be delayed by this intersection and would experience free flowing conditions to the station ingress from Castle Hill Road. EIS2 has rejected this bus route option (Section 8.1.7) on the basis that the service is weakened along John Road and Neale Street. Commuters from these streets are within walking distance to the station or to bus stops in County Drive and Franklin Road!
- EIS2 (Section 8.1.7, page 61) gives the rationale for the proposed bus route, quoted below.

Station Access Rationale

The rationale for the preferred access arrangement is as follows:

1. *It will minimise diversion of existing bus routes and avoid routeing buses along Castle Hill Road, which would increase congestion and lengthen journey times for existing bus passengers as well as those accessing Cherrybrook station.*
2. *The proposed bus diversions via Robert and Franklin Roads to the station precinct will actually increase the catchment area of existing services and enhance accessibility generally.*
3. *It will maximise safety and accessibility to and from the station precinct for both pedestrians and vehicles, minimising pedestrian movements across Castle Hill Road and allowing adequate sight distance for vehicles to turn safely into and out of Castle Hill Road.*
4. *It will protect traffic flow efficiency along Castle Hill Road whilst equitably balancing traffic change across the local road network.*

Point 1 would not be a problem if County Drive was relined as explained above. Castle Hill Road is free flowing eastwards from County Drive and does not clog up in the AM period until east of Edward Bennett Drive.

Point 2 that diversions along Robert and Franklin Roads increases the bus route catchment is a ridiculous claim and ignores the fact that a new bus interchange is being created at the station. Commuters living along Robert and Franklin Roads are within walking distance to Cherrybrook station and existing bus stops. Cherrybrook station will become a new bus interchange, ie commuters will walk to the station to catch both trains AND buses.

Point 3 is equally true if buses proceed along County Drive and Castle Hill Road to the station entrance.

Point 4 is nonsense. Whilst the proposed bus route does leave the traffic flow along Castle Hill Road unchanged, the traffic change across the local road network is clearly **NOT** equitably balanced if **ALL** the buses are diverted along the same two roads – Robert and Franklin Roads.

These four points for the EIS rationale are very weak. In addition, diversion of bus routes along Robert and Franklin Roads is contrary to the proclaimed traffic management strategy of discouraging ‘rat-running on residential streets’.

F. Surplus land usage. From reading the EIS 1 and attending community information briefing sessions, my initial impression of the NWRL project is that the size of the project and the scale of the civil engineering footprint during the construction phase of the Cherrybrook station precinct is much larger than the community initially expected. EIS 2 confirms that when the construction phase is complete there will be considerable excess spare land left over at each of the 8 NWRL stations, including Cherrybrook station, surplus to the requirements for station operation. This surplus land, marked on the EIS2 maps as ‘Future use to be determined by Master plan’ should be used to provide additional benefits such as landscaped park area or additional parking space for commuters and should not be sold off for high rise development, for example, to the detriment of the local community.

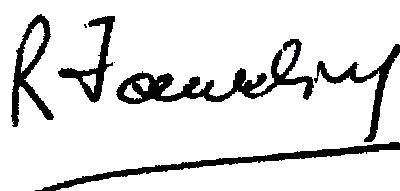

Recommendations for Cherrybrook station precinct.

1. After the construction phase is complete, the Glenhope Road traffic signals be replaced with a pedestrian underpass or overpass into the station entrance.
2. Commuter bus routes to Cherrybrook station should use County Drive and Castle Hill Road.
3. County Drive be opened to its full width to fully utilise its traffic capacity.
4. At the station precinct an ingress lane off Castle Hill Road be constructed for bus and car entry to the station.
5. No bus feeder route along Robert Road.
6. No change to Robert Road north of the station precinct.

I declare that I have made no political donations in the previous two years.

Yours sincerely

Richard Fawdry

Appendix 2: Barrier Counts

Appendix 2 shows the number of passengers entering and exiting each CityRail station by time period on one weekday in 2010. These figures are based on actual counts of passengers entering and exiting the stations. The passenger counts on which the figures are based are conducted either on a Tuesday, Wednesday or Thursday, not during school holidays.

This list includes the 3 new ECRL (Epping to Chatswood Rail Link) stations opened on 23 February 2009. However, it does not include the 4 Airport Line stations opened on 21 May 2000.

Appendix 2 (a)

2010 Weekday Station Entries and Exits

Alpha Sort

Appendix 2: Barrier Counts

Appendix 2 shows the number of passengers entering and exiting each CityRail station by time period on one weekday in 2010. These figures are based on actual counts of passengers entering and exiting the stations.

The passenger counts on which the figures are based are conducted either on a Tuesday, Wednesday or Thursday, not during school holidays.

This list includes the 3 new ECRL (Epping to Chatswood Rail Link) stations opened on 23 February 2009. However, it does not include the 4 Airport Line stations opened on 21 May 2000.
