NSW Planning and Environment

This is my submission OBJECTING to the proposed Brandy Hill Quarry Expansion.

Noise and Dust:

I live on a grazing property at Glen Oak and we are already significantly impacted and exposed to dust and noise. We can already see clouds of dust above the quarry at times. If this expansion is approved the dust will worsen.

The increased PH of the dust particles causes accelerated corrosion problems to our farm machinery and infrastructure.

Both my wife and son are Asthmatic. Dust levels are known to cause increase symptoms of Asthma.

Noise pollution from blasting and crushing already impact our rural amenity. We have heard blasting regularly outside of the Quarries normal operating hours already. This shows already a disregard to any restrictions and legal obligation the organization has towards its conditions of operating.

Truck movements:

Truck movements on rural roads, increased traffic congestion increases potential for accidents. Local road conditions are already poor and we often have damaged road surfaces. Increased disruption will also include maintenance crews on roads.

I am a University Student and commute to Callaghan Campus. I am very concerned at the safety of the local roads in the area.

Water table:

We have spring fed dams and Storks creek runs through our property, which feeds directly into Williams River. We have concerns that the size of the proposed depth of the excavation below sea level will impact on our water.

A J Sherritt
