*SUBMISSION to the BERRIMA RAIL PROJECT EIS. SSD7171*

*My objections to the above Rail Project include:*

- We already hear trains from the cement works, more trains from the coal mines would create even more noise,*
- It appears that the coal trucks will be un-covered, this would result in widespread pollution along the rail network from Medway to east of Robertson, a large amount of the rail Network being close to residential areas.*
- already, there is minor disruption to road traffic at railway crossings due to trains from the cement works, this will increase dramatically with the extra trains from the coal mines.*
- more trains means more delays to local emergency vehicles.*
