Dear Madam/Sir

Please, accept my submission relating to the Narrabri Gas Project EIS.

I strongly object to this project and believe it should be rejected for the reasons outlined below.

If approved, the project would:

- Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there has no safe disposal plan been outlined.
- Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique flora and fauna.
- Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.
- Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

It is my strong view, that in addition, the project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

Based on previous coal seam gas activities in Queensland, I can see no justification for the project as Santos' own coal seam gas export activities in Queensland have undoubtedly caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Yours sincerely,

Maren Götzmann
