This is a submission to the Narrabri Gas EIS.

I object to this project.

- As a resident near the proposed Santos site I have real concerns in regard to our water supply, that being the artesian basin. I am concerned about the amount of drawdown that will result from the extraction of billions of litres of water being removed, and the impact to our lives if our bore fails.
- I am equally concerned with the issue of toxic chemicals used in GSG extraction and any impact that may have on my family and myself.
- I have issue with potential noise pollution and additional traffic in and around our property.
- My feeling is the project will cause irreversible damage to our town due to the influx of outside contractors causing major long term disruptions to housing, increased costs of living and impacts on the social and economic stability of our town.
- We also have grave concerns for the native flora and fauna in our area with potential pollution issues, a number of which have already arisen from the existing wells.

Yours Sincerely
