**RE: Hume Coal's proposed mine in the Southern Highlands
Hume Coal Project EIS SSD 15_7172**

I wish to register a strong objection to the proposed mine in the Southern Highlands.

HUME COAL has had six and a half years to prepare its EIS for this project – it is an outrage that the community has only 60 days to respond but, accordingly, here are the reasons I ask the NSW Government to reject the planned mine in any form.

WATER

Pollution of our rivers and streams – there is a serious risk of toxic mine waste water polluting Oldbury Creek, the Wingecarribee River and other streams, all of which end up being part of Sydney Water Catchment.

Further, existing water bores, and any future bores throughout the region will be seriously compromised. Many landowners will be affected with some bores drawn down by up to 80 metres, with the impact lasting for decades.

SOCIAL IMPACT

The uncertainty around this problem-ridden project has already caused anxiety, depression and ill-health in the community. The aggressive approach taken by Hume Coal, and the lack of transparency of their operation has made things very much worse and will only be amplified if a mine is approved.

I also wish to draw the Department's attention to the appalling track record that POSCO, Hume Coal's parent company in South Korea, has on the international stage. I have simply Googled POSCO and 'human rights'... 'environment'... 'corruption' and been horrified to find highly credible documentation of their dubious methods, values and wanton behavior as a major multinational corporation. WHY should we have ANY faith that this is not how the precious Southern Highlands will be treated.

PROPERTY VALUES

Due to the potential impacts of the mine, property values are already falling in the affected areas – properties which lose their water (and potentially their businesses) will be worst hit.

ECONOMICS

Hume Coal's EIS completely ignores serious impacts on local industries, which contribute vastly more to the Highlands than mining ever will, should this project go ahead (see above). Loss of local jobs due to mining will greatly outweigh the relatively small number of jobs that Hume (dubiously) claims will be created in this specialized, highly automated and dangerous underground operation. There is enormous potential for future jobs growth in more sustainable industries such as agri-tourism. Uncertainty around the mine's future is reducing this potential.

As I understand it, the project will contribute very little to the NSW government by way of royalties.

HERITAGE

The Sutton Forest and Berrima areas contain some of Australia's most valuable and pristine colonial heritage assets – especially the township of Berrima. A coal mine in such an area will have a serious impact on the attractiveness of the area for tourism and heritage related activities on which the economy of the region depends, and which are key to its future prosperity.

WASTE

The plan to reinject the potentially toxic mine waste (including the chemicals used in the coal washing process) back into the mine. This largely untested technology obviously has the potential of failing, and then polluting any groundwater in the aquifer above the mine. Any new water bores drilled after mining could be compromised.

TRAINS, DUST & DISRUPTION

Hume plans to have 4 long coal trains every day thundering 24/7 from Medway through Moss Vale and Robertson down to Pt Kembla AND BACK, creating noise, dust and traffic disruption along the way.

DUST

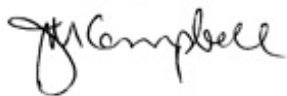

Hazardous coal dust carries a long way in the windy conditions that often occur in the Highlands. Along with diesel emissions, dust particles are a potential threat to human health, particularly in areas of higher population like Sutton Forest, Berrima, Burradoo, Moss Vale and Bowral.

The project has risks and uncertainties that cannot be measured.

In essence, I believe that the project is economically unviable and unsustainable, it is environmentally destructive, a health hazard, a disaster for the key economic drivers of the Highlands (health care, retail trade, education and training, accommodation and food services, agriculture etc) and, socially and historically anathema to the established, and greatly envied way of life for many in the state of NSW and beyond.

I ask the NSW Government to reject this proposal.

Yours sincerely,
