Major Projects Assessment  
GPO Box 39  
Sydney NSW2001

With reference to North Connex Application No, SS1 13\_6136

I object to the above project EIS as it now stands on the grounds as listed below.

Planning too hasty due to political pressure

Not enough detail in proposed plans

No environmental impact statement specifically designed for the Effect on existing infrastructure, within 500 metres, and then 1000m, in increments of 500m until the effects on infrastructure is negligible.

The value of homes in the immediate area are being heavily discounted when presented for sale compared to pre application ss1 13 6136 values.

What form of compensation to those property owners affected is proposed and how do you place a value on the very air we breathe?

Regardless of falling values, clean air for people living and working in this area or any area should never be threatened in the name of so called progress. A detailed EIS and remedies must be found if needed.
