

Attachment A - Palling Yards Windfarm - Turbine Spacing

Approximate Scale on A4: 1:100,000. - Contour Interval: 20 metres - Grid: 1,000 metre intervals

Note: Ellipses around turbine locations are 8 rotor diameters x 5 rotor diameters and are arranged in expected direction of prevailing wind. If the turbines were sited in accordance with the '5x-8' rule of the SEDAN NSW Wind Energy Handbook 2002 then the ellipses would not overlap.
