To whom it may concern,

As a regular visitor to the pristine area in question,(my sister is the next door neighbour to the proposal) I frequently enjoy the sport of "Stand up Paddle" almost daily through the area in question. I am in an elevated standing position with polaroid glasses enabling me to manoeuvre quietly between mangrove trees and along the foreshore to witness the active marine and bird life in the surrounds This includes newly born fish, crabs, oysters, larger predator fish, various rays and turtles, large and small. Lets not forget the magnificent sea eagle perched high up in the tree waiting to swoop on the fish below(will this tree remain)

This area in the proposal is a nursery to various forms of marine life and any development to the defined area is clearly in danger of upsetting the delicate harmonics of nature
