Your ref:

Dear Tatsiana,

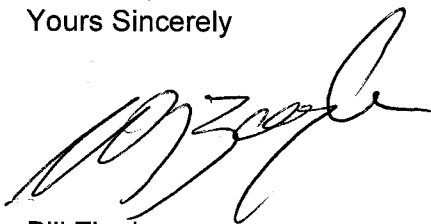

**Springvale Water Mod 3- Interim Water Management Strategy (SSD 7592 Mod 3)**

The Dams Safety Committee (DSC) has reviewed the Modification Report for the interim water management strategy. It is noted that a prescribed dam (Thompsons Creek Reservoir) has a function in the Water Management Strategy as a water storage.

As no changes to the dam are proposed and the dam's part in the water management strategy is to hold water, a purpose for which it was designed; there is no impact on the safety of the dam. Therefore the DSC has no comment on the proposed modification to the Water Management Strategy.

To discuss this situation further please contact William Ziegler the Manager of Mining Impacts at the Dams Safety Committee, on 9842 8077 or at [bill.ziegler@damsafety.nsw.gov.au](mailto:bill.ziegler@damsafety.nsw.gov.au).

Yours Sincerely

Bill Ziegler  
**Manager Mining Impacts  
Dams Safety Committee**
