

I write in SUPPORT of this project !

For once a non-polluting, non-invasive project with a positive future for all concerned (unlike coal mines).

Wollar Solar Farm is a positive development for the environment and society because it will:

1. Feed **290MW green power** with battery storage into the national electricity grid
2. **Displace approx. 515, 564 metric tonnes of CO₂**
3. Generate enough clean, renewable **energy for about 104,926 average NSW homes**
4. **Support Commonwealth and NSW climate change commitments**
5. **Create local job and training opportunities** that will help to reinvigorate the Wollar community
6. **Diversify the regional economy**
7. **Inject expenditure in the local area** and improve the viability of Wollar General Store

The local community in Wollar has been impacted severely by the expansion of the Wilpinjong open cut coal mine.

In stark contrast to that dirty filthy project, the Wollar Solar Farm is supported by the local community because:

1. There is **no land use conflict** from this project in the area
2. There are **no amenity or visibility issues**
3. The new development **will create clean local jobs and attract new families** to the Wollar district
4. The project has **none of the negative social and environmental impacts produced by the neighbouring Wilpinjong open cut coal mine**

I thoroughly support the implementation of this project and all the positive benefits for everyone.
