Subject: Third Track EIS

I regret not having contacted you earlier. My workload is very great at the moment.

I need to inform you that I held a Ministerial Appointment with DOP in the late eighties to audit the acoustic and vibration properties of the Rooty Hill Steel Mill. I was also Senior Principal Research Scientist with the Acoustic and Vibration Group of the CSIRO National Measurement Laboratory. I can say with authority that the SLR Acoustic Report is one of the I have ever seen to cover up essential facts about the noise impact.

In respect of the key areas of concern : sleep disturbance, the consultant

Deleted per DP&I Privacy Policy

There are no actual sleep disturbance survey results. Correct key background noise levels are not given so that a proper assessment can be made. I advise the Department of Planning under no circumstances should it endorse this material nor the dishonest Heritage report. This whole affair is heading for a legal showdown. Incidentally where is the full economic analysis to justify this project? Charlatans can quote anything as they have done, but do not expect us to believe it. I have proper BTE data which tells a different story.

Yours sincerely,
Dr John Goldberg
