TO WHOM IT MAY CONCERN

Herewith please find our objection to The Glen Innes Wind Farm Mod 4 application.

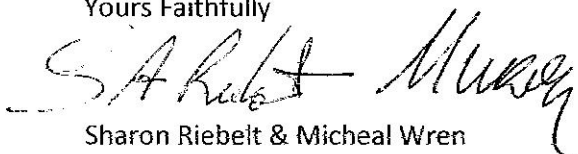

My Brother and I agist our horses at Minumurra Stud in the Matheson Valley. We were out at the Stud the other day to see them . While we were there the noise coming from the White Rock Wind farm on the western side of the Valley was in our opinion "ridiculously Loud!"

We are told that if the Mod 4 goes through with the Glen Innes Wind Farm turbines proposed for the eastern side of the Valley, that they will be even bigger and we assume even noisier.

We actually think that it would be unreasonably cruel to inflict, on the residents of this Valley, the imposition of any wind towers at all along it's Eastern side. You've already got them on the western side of the Valley, and will soon have them South as well. If you put them up on the Eastern ridge, you'll have them almost completely ringed in with these grinding, roaring lumps of steel. You'll virtually be condemning these poor people in the Valley to be living in the middle of a factory. What a shame considering how soft and pristine this country use to be!

In addition we are having serious reservations as to the health implications of not only our horses but also the people around them. If you go ahead with the Glen Innes field, we will have to seriously consider moving our horses from Minumurra and believe that other owners would do the same. This means that you would be damaging Mark Ritchie's business as well as his health.

Yours Faithfully
