

Emma Barnet - Proposed Building & Construction Waste Recycling Facility, Moorebank (MP 05_0157)

Project Application #: 05_0157

Dear Planning,

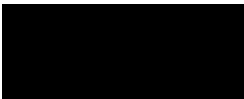

I am strongly against the proposed recycling plant at Moorebank. Most, if not all, people from the community are against it as well. This is being built too close to a residential area.

Some of the reasons are the following:

- This will heavily increase the traffic from all the vehicles going in and out of the recycling plant, especially the trucks. There are already a lot of traffic around the area. Even if they propose to build another road for the plant, it will not stop them from using currently existing roads and cause traffic.
- Noise from all the trucks is an issue.
- Noise from the recycling plant is a concern. They may have done some preliminary testing but these will never be accurate. It is just too close to the residential area for it to have minimal effect.
- Dust could be a problem thus imposing health risks to the residents. They may be proposing to water the materials but this will not guarantee that it will prevent dust from spreading. It will still generate a lot of dust in the area from trucks and the plant itself.

Please look into the proposed plant and weigh up all the concerns.

Thanks in advance,

Dear Planning,

My family and I are strongly against the proposed recycling plant at Moorebank. All people from the community are against it as well. This is being built too close to a residential area.

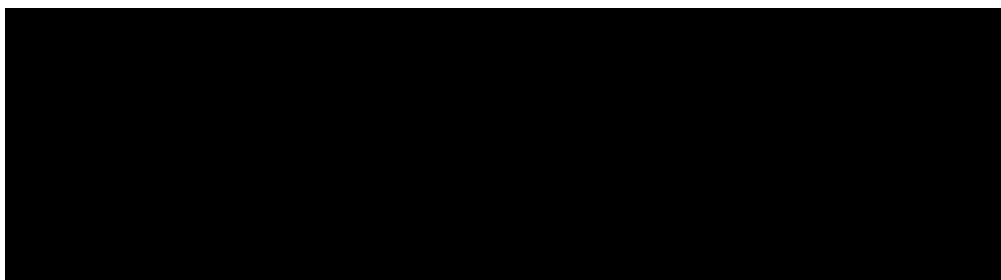

Some of the reasons are the following:

- This will heavily increase the traffic from all the vehicles going in and out of the recycling plant, especially the trucks. There are already a lot of traffic around the area. Even if they propose to build another road for the plant, it will not stop them from using currently existing roads and cause traffic.
- Noise from all the trucks is an issue.
- Noise from the recycling plant is a concern. They may have done some preliminary testing but these will never be accurate. It is just too close to the residential area for it to have minimal effect.
- Dust could be a problem thus imposing health risks to the residents. They may be proposing to water the materials but this will not guarantee that it will prevent dust from spreading. It will still generate a lot of dust in the area from trucks and the plant itself.

All potential concerns outweigh any benefits the recycling plant has.

Please look into the proposed plant and weigh up all the concerns.

Thanks in advance,
