

7 CONCLUSIONS

The subdivision works have been designed to minimise waste and mitigate any potential adverse impacts on the environment including adjacent residents. This management plan details the commitments proposed to achieve these objectives.

The following management measures would be adopted to minimise potential environmental impacts:-

- Dust suppression;
- Stockpile protection;
- Erosion and sediment control;
- Noise control through appropriate mufflers on construction equipment;
- Bunding for chemical storage;
- Appropriate working hours; and
- Best practice waste management.

Therefore, the proposed works would not have a significant adverse impact on the existing surrounding environment during the construction period and disposal of waste materials would be minimised.
