Jane Thrift, of DENMAN NSW, made the following submission on the project:

Mangoola Mine - Modification 6 - Extraction Rate Increase

Objects to this project

Re: 06_0014Mod6

In relation to the above modification we object on the following grounds namely; Water. Our household tank water supply has been adversely affected by fallout from the mine and is totally unusable, Dust. We continually have dust problems and with the modification this will increase significantly with consequences to our health, respiratory complaints, asthma and heaven forbid perhaps the likelihood of pulmonary fibrosis. Noise and Lighting. With the onset of an onsite mobile gravel crushing plant we will be subjected to more noise extra lighting coupling with the minor modifications to the washery and extra trains on the rail loop continual noise night and day and noise inversion we have diminished lifestyle, health and quality living. With the waste through the pipeline to the Hunter River this just will add to an already polluted river system and will be detrimental to industry relying on the Hunter River for their livelihoods. This should not even be entertained by the Planning Department. Farmers and Residents rely upon the competency of your Department to safeguard our farms, livelihoods and Cities and Towns which depend on the Hunter River.
