Hanson Construction Materials
Level 5, 75 George Street
Parramatta, NSW 2150

Attention: Andrew Driver

Dear Andrew

**Proposed Hard Rock Quarry
Guyong, NSW
Potential Implications on the Air Quality Assessment with Haul Road Relocation**

Further to our report (our ref 10-2465R1, dated 7 June 2007), we note that you are seeking a Section 75W modification for the relocation of the sealed site access road from its approved location and alignment.

It is noted that the above Air Quality Impact Assessment (10-2465R1) assumed that the haulage of materials was to be performed by the operator on site haul roads and then on a sealed road between the weighbridge and Mitchell Highway (*pers comms Andrew Driver, 17 August 2012, 6 September 2012*).

In the original AQIA, the emissions to air from traffic using the sealed road was not considered due to the low emission rate of particulate from sealed roads. This assumption was incorporated within the AQIA which was subsequently accepted by the relevant regulatory bodies, and this is the basis upon which Development Approval was granted.

The proposed realignment of the sealed road does not represent a change to that assessment that would have a material effect upon the conclusions of the AQIA upon which Development Approval was granted.

Yours sincerely

GARY GRAHAM
Technical Director
