1325       0371944       6353684       North       A Machine made brick building with sandstone foundations, corners (Quoins), window lintels. Double sash windows. External condition of building appears average but has clearly been modified. There is some evidence that the building has been modified at the southern and eastern ends. On this southern side a corrugated iron addition covers what may have once been an access point between the two structures. Also several bricked up windows with sandstone lintels are evident on this southern side as are hole for support beams cut into the sandstone corner blocks.         1326       371921       6353704       North       Alternate view of brick/sandstone building may have once had a veranda but this too has been removed, evidence of which are rectangular holes cut into the sandstone corner blocks.         1326       371921       6353704       North       Alternate view of brick/sandstone building showing southern extent modifications and Gantry running overhead.         1327       0371888       6353721       East       Rear of brick/sandstone building showing southern extent modifications and Gantry running overhead.         1328       0361836       6353686       South       View of Shed 1 from under Gantry East         1330       E0371686       6353499       East       View of Sheds 1, 2, and 3 with railway line in foreground         1331       0371820       6353469       North       Sheds 1 and 2       East         1333       0371740       6353469       North <td< th=""></td<>

Annex B

# Aboriginal Heritage Assessment

#### B.1 OBJECTIVES OF THIS ANNEX

The objective of this annex is to determine whether any Aboriginal heritage sites have been previously recorded within the study area and to ascertain the level of archaeological potential for unrecorded Aboriginal sites.

## B.2 AHIMS SEARCH

A search of the AHIMS at DECC within a 5km by 5km area centred around the IFL study area. The search identified 17 recorded sites (see Figure in *Annexe B*) which comprised of artefact scatters and a mixture of isolated finds, scarred trees and stone arrangements. The recorded sites are situated outside the boundary of the study area and the predominant remains recorded are Aboriginal artefact scatter.

### B.3 ARCHAEOLOGICAL POTENTIAL

Based upon the environmental background, historic impacts regional and archaeological patterns, it is possible to provide a predictive statement for the occurrence of Aboriginal sites within the study area.

Due to the disturbed nature of the IFL site (c.f. discussions in the body of this report) through its use as an industrial site for the better part of a century, the archaeological potential (defined here as relating to the possibility of discovering heritage site with a reasonable condition and integrity) can be described as very low to none.

### B.4 DISCUSSION

Due to the long period of occupation and use of this site for industrial purposes there is a very low possibility of any Aboriginal heritage site being found of a reasonable condition and integrity.

In the case that an Aboriginal object (as defined by the NSW *National Parks and Wildlife Act* 1974) work should cease and the Department of Environment and Climate Change (DECC) should be contacted.
