Subject: The Spit VR1

William,
the installation (retro fitting) of the Vapour Recovery Stage 1 system at The Spit was carried out in accordance with the requirements of AS4897-2008. The installation was designed by a competent UPS System designer in accordance with Clause 2.2.1 and the installation complies with Clause 4.3.6.

I am waiting on the Site Works As-Laid Plan to be finalised for adding to the site dossier so that Appendix C (Certification and Record Keeping) is also complied with, at which time I will repeat this email on letterhead.

This information should suffice for Planning issues in the meantime.

Regards

Barry Boné AMS (Grad) AIDGC
