This report has been prepared in accordance with the terms and conditions of appointment. Cundall Johnston & Partners Pty Ltd trading as Cundall (ABN 16 104 924 370) cannot accept any responsibility for any use of or reliance on the contents of this report by any third party.

The success and realisation of the proposed initiatives will be dependent upon the commitment of the design team, the development of the initiatives through the life of the design and also the implementation into the operation of the building. Without this undertaking the proposed targets may not be achieved.

### **Executive Summary**

The proposed residential and retail development at 23 – 41 Lindfield Ave, and 7 and 11 Havilah Lane, Lindfield has committed to a high level of environmental performance.

This report summarises assesses the proposed Environmentally Sustainable Development (ESD) strategy for the site according to three sustainability tools which regulate residential development in NSW, namely;

- BASIX, a planning tool for residential development which calculates energy and water efficiency and sets minimum thermal performance requirements;
- NatHERS, which determines thermal performance of apartments;
- SEPP 65; the State Environmental Planning Policy regulating the design quality of residential flat development in terms of solar access and natural ventilation.

A separate ESD strategy has been developed for the retail component of the development, in coordination with the retail tenant IGA. This includes compliance under BCA Section J1 Building Fabric and J2 Glazing, as well as best practice ESD strategies for retail fitouts.

The following tables identify the compliance of the development with these tools;

#### <u>Residential</u>

#### BASIX and NatHERS targets;

| Environmental Impact Category | NSW BASIX<br>Minimum Target | % Achieved |
|-------------------------------|-----------------------------|------------|
| Water Savings                 | 40%                         | 40%        |
| Energy Savings                | 20%                         | 22%        |
| Thermal Comfort (NatHERs)     | Pass                        | Pass       |

#### SEPP65 targets;

| SEPP 65 Rule of Thumb  | SEPP 65 target | % Achieved |
|--|----------------|------------|
| Living rooms and private open spaces should receive<br>a minimum of 2 hours direct sunlight between 9am-<br>3pm in mid-winter, for at least 70% of apartments. | 70%            | 70%        |
| Maximum number of southerly single-aspect apartments is 10%  | 10%            | 0%         |
| 60% of units should be naturally cross-ventilated  | 60%            | 55%        |

#### <u>Retail</u>

The minimum thermal performance requirements to meet BCA Section J1 Fabric nad J2 Glazing requirements are summarised in Section 4 of this report.

The retail development is committed to exceeding minimum requirements through implementation of a number of best practice initiatives including but not limited to low-flow water-efficient toilets and tap fittings, energy efficient lighting and controls and waste minimisation in construction and operation.

### **1. Introduction**

This ESD report has been prepared to accompany an application to modify the Minister for Planning & Infrastructure's approval of Project Application MP 08\_0244 for the mixed use development at 23-41 Lindfield Avenue and 7 and 11 Havilah Lane, Lindfield.

The proposed modifications to the development comprise the integration of Lot D in DP 347906 and Lot 4 in DP 713505 (39 and 41 Lindfield Avenue) into the development site and resulting amendments to the design of the mixed use development. Accordingly the modified description of development is summarised as follows:

- demolition of existing structures on the site;
- excavation of the site;
- construction of a mixed use development with a maximum gross floor area (GFA) of 15,487m<sup>2</sup>, comprising:
  - 2,720m<sup>2</sup> GFA retail floorspace at ground floor within a single storey retail podium;
  - 141 residential apartments in two (2) towers above the retail podium;
  - Four (4) levels of parking for 241 vehicles;
  - 898m2 of communal open space at podium level between the two towers;
  - associated landscaping, servicing and infrastructure; and
  - fit-out and use of the proposed major retail tenancy as a supermarket.
- FSR at 3.90:1 (0.68:1 retail and 3.22:1 residential).

NSW regulation requires the residential class 2 portion of 23-41 Lindfield Ave to be assessed under the following two tools;

- BASIX (including NatHERs for thermal performance)
- SEPP65

In addition, the retail development must comply with comply with the fabric and glazing requirements of BCA Section J1 and J2 respectively.

This report details the NSW regulatory requirements of BASIX, SEPP65 and BCA Section J1 and J2 for the development and the strategies employed to achieve (and insome cases exceed) compliance.

#### 1.1 BASIX Targets

23 – 41 Lindfield Ave, and 7 and 11 Havilah Lane, Lindfield is located in NatHERs climate zone 56 and is required by NSW regulation to achieve the following BASIX targets for energy, water and thermal comfort;

| Environmental Impact Category | NSW BASIX<br>Minimum Target |
|-------------------------------|-----------------------------|
| Water Savings                 | 40%                         |
| Energy Savings                | 20%                         |
| Thermal Comfort               | Pass                        |

Energy and water targets represent a percentage saving compared to a NSW average benchmark. Thermal comfort targets are a pass/fail measure and are assessed using second generation NatHERs approved thermal modelling software to estimate each dwellings performance against climate specific heating and cooling load limits.

### 1.2 SEPP 65 Rule of Thumb

In addition to BASIX, the following SEPP-65 rules of thumb are applicable to the development;

| SEPP 65 Criteria  | SEPP-65 Target |
|---|----------------|
| Living rooms and private open spaces<br>should receive a minimum of 2 hours direct<br>sunlight betw een 9am-3pm in mid-winter,<br>for at least 70% of apartments. | 70%            |
| Maximum number of southerly single-<br>aspect apartments is 10%   | 10%            |
| 60% of units should be naturally cross-<br>ventilated   | 60%            |

Solar access modelling has been conducted to determine the direct sunlight into each apartment during the winter solstice and a cross ventilation analysis has been conducted based on the location and orientation of operable windows in each apartment.

#### 1.3 Retail ESD Strategy

The ESD strategy for the retail component is outlined in Section 4.

### 2. BASIX

### 2.1 Water Efficiency

The BASIX water strategy for the site utilises water efficient sanitary fixtures to reduce water consumption throughout the development. The utilisation of efficient fixtures will not only reduce sanitary water consumption, but in turn also reduces the wastewater to be discharged to the sewerage system.

Further potable-water savings are achieved through the utilisation of rainwater for landscape irrigation.

Proposed strategies to achieve the BASIX water target of 40% reduction in potable water consumption are outlined in the table below:

| BASIX Base Case       | Water Conservation Strategies   |  |  |
|-----------------------|---|--|--|
| Fixtures <sup>1</sup> | <ul> <li>Water efficient fixtures including <ul> <li>3-Star show erheads (&lt;7.5L/min);</li> <li>4-Star kitchen taps</li> <li>5-Star bathroom taps; and</li> <li>4-Star dual-flush toilets.</li> </ul> </li> </ul> |  |  |
| Appliances            | <ul><li>4 Star WELS rated Dishwashers.</li><li>Clothes washers not specified</li></ul>  |  |  |
| Common Areas          | <ul> <li>32.486kL rainw ater storage for landscape irrigation and car washing bay</li> <li>Fire Sprinkler test water is contained in a closed loop</li> </ul>   |  |  |
| BASIX Water Target    | 40%   |  |  |
| BASIX Water Score     | 40%   |  |  |
| Compliant?            | ✓   |  |  |

<sup>&</sup>lt;sup>1</sup> More information on water efficient appliances can be found at www.waterrating.gov.au

### 2.2 Energy Efficiency

Strategies to achieve the BASIX energy target of 20% reduction in energy consumption are outlined in the following table:

| BASIX Base Case      | Energy Conservation Strategies   |  |  |
|----------------------|--|--|--|
|                      | <ul> <li>Variable Speed Drive (VSD) car park ventilation with carbon monoxide<br/>sensors (supply and exhaust)</li> </ul>  |  |  |
|                      | <ul> <li>Mechanical ventilation to service/plants, switch rooms and garbage rooms<br/>(exhaust only)</li> </ul>  |  |  |
| Common Areas         | <ul> <li>Mechanical ventilation to hallways and lobbies with time clock controls.<br/>(supply only)</li> </ul>   |  |  |
|                      | <ul> <li>Fluorescent lighting with motion sensors to all common areas including (but<br/>not limited to) car park, garbage rooms, lobby/stairways, service/plants and<br/>switch rooms.</li> </ul> |  |  |
|                      | LED lighting to lift car, connected to call buttons  |  |  |
|                      | Residential lifts - Gearless traction with VVVF motor  |  |  |
|                      | Gas cooktop and electric oven  |  |  |
| Appliances           | • 4 Star dishwashers   |  |  |
| Appliances           | 2 Star clothes dryers  |  |  |
|                      | No refrigerators specified   |  |  |
| Domestic Hot Water   | Central Gas-fired boiler with R1.0 pipe insulation   |  |  |
|                      | • 1.5 Star (1-phase) heating and cooling to living rooms and bedrooms  |  |  |
| Air-conditioning and | • Kitchen exhaust, individual fan ducted to facade (manual on/off switch)  |  |  |
| ventilation          | • Bathroom exhausts, individual fan ducted to facade (interlocked to light)  |  |  |
|                      | Laundry exhausts, individual fan ducted to facade (manual on/off switch)   |  |  |
| Lighting             | Dedicated LED or Fluorescent lighting throughout dwellings   |  |  |
| BASIX Energy Target  | 20%  |  |  |
| BASIX Energy Score   | 22%  |  |  |
| Pass?                | $\checkmark$   |  |  |

### 2.3 Thermal Comfort

The thermal properties of the building fabric have been chosen to achieve thermal comfort within the dwellings for the greatest percentage of the year. In the Eastern Sydney climate zone (56) in which the building resides, consideration must be given to reducing both heating and cooling loads to ensure thermal comfort in summer and winter months.

The table below identifies the fabric and thermal properties of the building elements modelled in the NatHERs assessment to achieve the thermal comfort targets specified by BASIX.

| Building Envelope Requirements |   |  |  |
|--------------------------------|---|--|--|
| Construction & shading         | As indicated on the architectural drawings  |  |  |
| External Wall                  | • 200mm Concrete + R1.5 insulation + plasterboard   |  |  |
| Internal Walls                 | <ul> <li>Plasterboard on Stud (internal apartment)</li> <li>ACC + plasterboard (party walls)</li> </ul>   |  |  |
| Roof                           | <ul> <li>200mm Concrete + R3.0 insulation + plasterboard ceiling</li> <li>200mm Concrete + R1.0 + plasterboard ceiling (below balcony)</li> </ul> |  |  |
| Floor                          | 200mm Concrete slab + carpet/tile   |  |  |
| Glazing                        | <ul> <li>single low -e: U 4.75 SHGC 0.45*</li> <li>Skylight : U 6.35 SHGC 0.77*</li> </ul>  |  |  |
| Ceiling penetrations           | <ul><li>All exhaust fans sealed</li><li>Rated without vented dow nlights</li></ul>  |  |  |
| BASIX Target                   | Average Thermal Load: Heating 51MJ/m <sup>2</sup> Cooling 45MJ/m <sup>2</sup>   |  |  |
| Lindfield Score                | Average Thermal Load: Heating 28.3MJ/m <sup>2</sup> Cooling 18.2MJ/m <sup>2</sup>   |  |  |
| Compliant?                     | $\checkmark$  |  |  |

\* All U-values and SHGC values are based on AFRC figures and are figures for total glazing including frames.

### 3. SEPP 65

SEPP 65 planning guidelines apply to the development and set targets for cross ventilation and solar access in new multi-unit residential developments.

The SEPP-65 criteria are:

- Living rooms and private open spaces should receive a minimum of 2 hours direct sunlight between 9am-3pm in mid-winter, for at least 70% of apartments.
- Maximum number of southerly single-aspect apartments is 10%
- 60% of units should be naturally cross-ventilated with recommended maximum building depth:
   10-18m (unless natural ventilation can be otherwise demonstrated)

| SEPP 65 Rule of thumb  | % Achieved | Compliant?   |
|--|------------|--------------|
| Living rooms and private open spaces should receive a minimum of 2 hours direct sunlight betw een 9am-3pm in mid-winter, for at least 70% of apartments. | 70%        | $\checkmark$ |
| Maximum number of southerly single-aspect apartments is 10%  | 0%         | $\checkmark$ |
| 60% of units should be naturally cross-ventilated with recommended maximum building depth: 10-18m  | 55%        |              |

### 3.1 Solar Access

The solar access requirements are:

• Living rooms and private open spaces should receive a minimum of 2 hours direct sunlight between 9am-3pm in mid-winter, for at least 70% of apartments.

Typical floors have been modelled to assess solar access into each apartment. The effect of the proposed development at 43-47 Lindfield Ave has also been considered. When modelled to include the current neighbouring properties 101 (72%) apartments achieve 2 hours of solar access to living rooms and/or private open spaces. The proposed neighbouring development at 43-47 Lindfield Ave will affect the solar access amenity into 4 dwellings, hence a total of 98 (70%) of apartments will achieve the 2 hour solar access requirement.

The study seen overleaf, illustrates the areas of the development that receive direct solar access between 9am and 3pm on the 21<sup>st</sup> June, including the effects of shading from the proposed development at 43-47 Lindfield Ave.

The six south-westerly apartments on level five of Building B include high level clerestory windows, providing solar access and ventilation. The solar access to these apartments is not visualised in the following images due to the angle of sun falling on the walls. Sun angle diagrams of the development are provided in Appendix 1. SEPP-65 Compliance and indicate that all of the six apartments achieve more than two hours of solar access due to the clerestory windows.

A full list of compliant dwellings that receive solar access into the living rooms, private open spaces and the effects of the proposed neighbouring development can be found in the appendices.

#### s.75W ESD Report

23-37 Lindfield Ave

s.75W ESD Report

### 3.2 Southerly Aspect

The southerly aspect requirement is:

• Maximum number of southerly (SW-SE) single-aspect apartments is 10%.

Each typical floor has been assessed and it has been concluded that all apartments are considered to either be dual aspect or do not only face in a southerly direction.

#### **3.3 Natural Ventilation**

The natural ventilation requirement is:

 60% of units should be naturally cross-ventilated with recommended maximum building depth: 10-18m

On review of each typical floor **77 (55%)** apartments comply with the cross-ventilation requirements of SEPP65. The compliant apartments are highlighted on the images below. A number of top floor apartments have been provided with operable skylights and roof clerestory windows, which enables them to achieve cross ventilation, these apartments are indicated in blue.

A full list of compliant apartments can be found in the appendices.

#### Level 2

| ODMAUNALI<br>LAGOSCAPING<br>AREA BELCIVI |
|--|
|  |
|  |

#### Level 3

### Level 4

Level 6

Level 7

### 4. Retail

### 4.1 Building Code of Australia (BCA) Section J

The retail portion of the development is required to comply with the BCA/NCC Section J for Energy Efficiency.

### J1.3 Roof & Ceiling

The roof and ceiling of retail spaces located below the exterior of the building or non-conditioned space, will achieve the following minimum total insulation levels for roof and ceiling constructions;

| Roof                        | Minimum Total R-value<br>Solar absorptance<br>(0.4 - 0.6) |
|-----------------------------|---|
| Below non-conditioned Space | 3.7   |
| Below External space        | 3.7   |
| Below landscaped area       | 3.7   |

The values above assume that the external roof surface is of a medium colour and solar absorptance. This is considered conservative for the areas with landscaping above, as landscaping and plants absorb heat and hence reduce the heat absorbed by the upper roof surface.

#### J1.4 Roof Lights

A skylight is provided in the roof of the ground floor retail corridor and provides light to the lobby along with adjacent retail spaces (retail 6, 8 and major). The area of skylight is 47.6m<sup>2</sup>, which is 4.7% of the area it serves.

| Location        | U-value | SHGC   |
|-----------------|---------|--------|
| Retail Corridor | ≤ 3.4   | ≤ 0.34 |

#### J1.5 Walls

The deemed-to-satisfy provisions specify the minimum total insulation levels for each external wall of a conditioned space and for internal walls separating conditioned space with non-conditioned space.

The development will be designed to comply with the requirements for climate zone 5, as summarised in the below table:

| Wall type   | Minimum Total<br>R-value for Wall |
|---|-----------------------------------|
| External envelope   | 2.8                               |
| Internal wall adjacent to non-conditioned space with mechanical ventilation $\leq$ 1.5ach | 1.0                               |
| Internal wall adjacent to non-conditioned space with mechanical ventilation > 1.5ach      | 1.8                               |

#### J1.6 Floors

The deemed-to-satisfy provisions for floors specify minimum insulation levels for the suspended floors of conditioned spaces above non-conditioned space.

The retail suspended floors above the car park and non-conditioned spaces will be designed to comply with the following thermal performance requirements for climate zone 5:

| Floor type                                  | Minimum Total<br>R-value for Floor |
|---|------------------------------------|
| Suspended floor above non-conditioned space | 2.0                                |

#### J2.0 Glazing

The retail glazing has been assessed to ensure that the aggregate air-conditioning value, calculated for each level and orientation does not exceed the allowance in Table J2.4a of the NCC. Based on the current design, each orientation will pass with single glazing of the thermal performance values summarised in the below table;

| Level           | Facade | U-value | SHGC   | Glazing type |
|-----------------|--------|---------|--------|--------------|
| Ground (Retail) | SW     | ≤ 7.0   | ≤ 0.73 | Single Clear |
| Ground (Retail) | SE     | ≤ 7.0   | ≤ 0.73 | Single Clear |

Note: All U-values and SHGC values are based on AFRC figures for total glazing including frames.

A completed glazing calculator can be found in the appendix.

### 4.2 Additional ESD Initiatives

The retail development is committed to exceeding minimum requirements through implementation of the following initiatives:

- Install low-flow water-efficient toilets and tap fittings;
- Install energy efficient lighting and controls;
- Submetering of major energy and water uses to monitor energy consumption and leakages;
- Separate collection and recycling of cardboard waste to minimise waste going to landfill;
- Divert from landfill (recycle and /or reuse) at least 80% of construction waste;
- Use best endeavours to select environmentally certified products and materials;
- Use best endeavours to select responsible materials such as FSC certified timbers and best practice PVC.
